

LITE PERFORMANCE BACKPACKS TECHNOLOGY

AIR PAD
SYSTEM

AIR PAD SYSTEM

The AIR PAD SYSTEM with its arrangement of 5 ventilation channels **01** (1 main channel and 4 sub-channels) and 6 strategically positioned 3D air mesh pads **02** offers the optimal combination of a close, load-neutral fit and back ventilation.

The shoulder straps **03** with air mesh and large ventilation holes ensure that the pack remains securely in place in any situation, and provide optimal breathability on the shoulders as well.

AIR TUNE
SYSTEM

AIR TUNE SYSTEM

The lightest back system for our lightest backpacks. The AIR TUNE SYSTEM offers minimal contact surface and maximum back ventilation for high-performance use. Ventilation channels **01**, 3D air mesh

padding **02** and shoulder straps with ventilation holes **03** make up the key features for maximum breathability when every second counts or simply for that little bit of added comfort.

BRACE LINK

The BRACE LINK adjusts the shoulder belts perfectly to the width of the athletes shoulders. This automatically adjustment endorse the load transfer to the body's centre of gravity, while at

the same time the contact areas with back and shoulders are minimized. Even wearing a neck brace is possible through the BRACE LINK.
