THE EVOC STORY
50 DESTINATIONS IN 20 YEARS

Over the last 20 years we have travelled to more than 50 destinations. With our mountain bikes or snowboards, always on the search for the best trails and greatest powder runs. We discovered fantastic places and found some amazing downhill runs. But what we couldn't find was equipment that met our needs. So, we began to develop and produce this equipment according to our personal preferences: top-quality, sophisticated products with useful features.

MILESTONES

1999 // AUSTRIA // ARLBERG

During a shoot for a snowboarding video on the Arlberg we experience an avalanche. Fortunately, nobody is trapped, but freerider and product designer Holger Feist crashes on his way through the couloir and injures his back. The cause: the avalanche shovel in his backpack. Holger's immediate conclusion is that a backpack with back protector would probably have prevented that. The idea for a backpack with back protector is born.

2000 // TIBET // MOUNT EVEREST BASE CAMP

The idea of a protector backpack could also work for mountain biking. Here too, the risk of falling onto your back is great. Plus, the ergonomics of the bike packs at the time are not really suitable for sporting use. »Like a football on your back!«, was Holger's fed-up conclusion after completing a three-week expedition through Tibet to the Mt. Everest base camp in 2000. The decision is made: There is a better way – we'll do it ourselves. Back in Munich, Holger starts to tinker, stitch and experiment.

Dissatisfaction with bike pack ergonomics

La Paz, Bolivia

First backpack prototype on trail + idea for BIKE TRAVEL BAG

Hong Kong

First EVOC shop + founding of EVOC

2003 // BOLIVIA // LA PAZ

The first prototype of the protector backpack is used on the trails around La Paz. And it works perfectly! But the equipment used during this trip highlights a completely different issue: instead of arriving in a carefully packed box, the mountain bike arrives on the belt at the airport in bits and pieces – fortunately without any parts missing! There is no satisfactory solution on the market for transporting bikes either. The trigger for developing the first BIKE TRAVEL BAG – a bag concept thought through to the smallest detail, for safe and convenient transporting of bikes. From the very beginning, the focus is on functionality, convenience, protection and quality, so that no-one would ever have to be annoyed about their equipment again. The protector backpack and bike travel bag are initially only produced for our own trips – and for friends who request them.

Quality, functionality and durability are still top priorities to us. And we are rather proud to say that we're also setting trends when it comes to design, comfort and protection. We still travel the world as much as possible with our sports equipment – although, these days, also more and more frequently with our business gear.

We're still testing all products ourselves and are working every day to improve them just that little bit more. Our DNA is in every single product – and in everything we do, we try and convey our passion for sports and travel.

Products from EVOC are consequently always a little more than just items of equipment. EVOC stands for evolution and the concept of high-quality, sporty backpacks, bags and luggage – with a particular focus on proper protection of man and material.

Protect the things you love! Or in short:
EVOC – PROTECTIVE SPORTS PACKS

2008 // HONG KONG

One day the phone rings and Bernd Stucke, friend and long-time travel companion from Hong Kong is on the line. He had taken his bike for service to the legendary »Flying Ball« bike shop in one of the first bike bags. Mr Lee – shop owner and bike expert – is so taken with this bike bag that he immediately orders 50 of them. The first real customer! So, in 2008, Holger Feist and Bernd Stucke found EVOC. Since then, a lot has changed for us, and yet so little.

FALL/ WINTER 2021/2022 // A NEW SEASON// EXPLORE TO RIDE

The quest for unique and unforgettable powder lines is not just part of our history, but also an integral element of EVOC's DNA. Of course we test the latest product ranges on these trips, however, it's much more about discovering potentials early on and also figuring out how to improve the tried-and-tested. When we travel, we also collect impressions and ideas which we later express in the product designs and colours of new collections.

We were fortunate enough to be able to travel to Kamchatka - just before the novel coronavirus brought the world to a standstill. This Russian peninsula with its giant snow covered volcanos was the destination of our very first winter expedition twenty years ago. At the time, even getting there was a huge undertaking and we had to conquer peaks left to our own devices. Today it is much less complicated to reach and the volcanos have been made so much more accessible that you can fully concentrate on the descents. This means that the required equipment has also changed considerably: bulky expedition gear has been replaced by more easily manageable luggage options. Sports equipment and paraphernalia has also become much more sophisticated and specific which has altered the demands we had of our products, too.

For **FALL/WINTER 2021/2022** we have completely revisited our colour and design concept and transferred this to our entire range. The **TRAVEL** line received a makeover and a few very

worthwhile new additions that make traveling with sports gear even more comfortable. The new **GEAR BAGS** and **BACKPACKS** are designed as versatile, practical transport helpers for all seasons - no matter if you need them for winter or summer sports. In addition, we have produced a new **MULTICOLOUR** edition that makes a real design statement.

Even if, as the idiom goes, the journey is the reward, there comes the magic moment when you stand at the drop-in of the powder line that you have yearned and worked for so long. Now it's not merely about finally finding out what the first run has in store for you, it's also a point when you're genuinely grateful for everything that offers some sense of safety.

That's exactly why we have developed an brand new range of protector backpacks, the **LINE PRO**: our new benchmark when it comes to winter sports backpacks with integrated protection.

We honestly hope that our new range not only offers inspiration for the best possible time in meters of powder next season, but also some useful products which make traveling more enjoyable and convenient and - most importantly - make your descents safer. We are thrilled to present you with the **EVOC FALL/WINTER 2021/2022** range which once again includes much more than simply pieces of equipment.

Your EVOC TEAM

HIGHLIGHT

NEW COLOURS AND DESIGN CONCEPTS

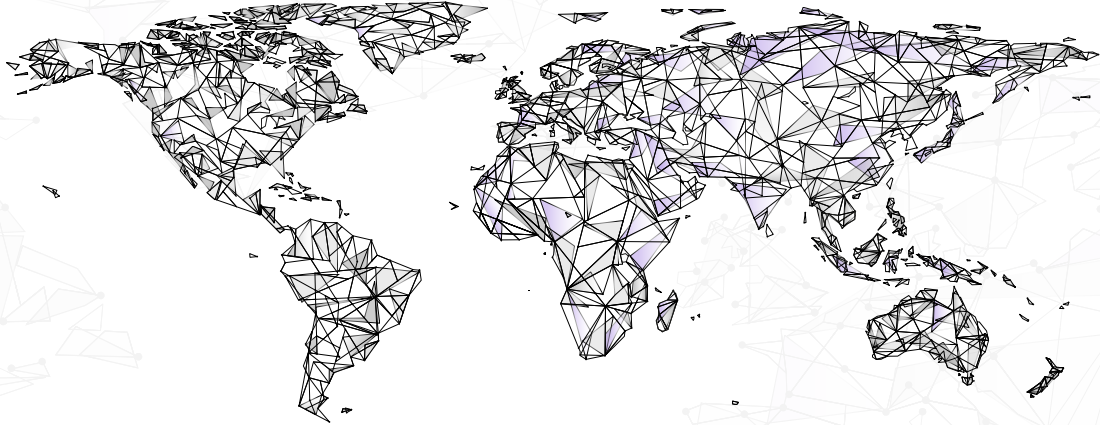

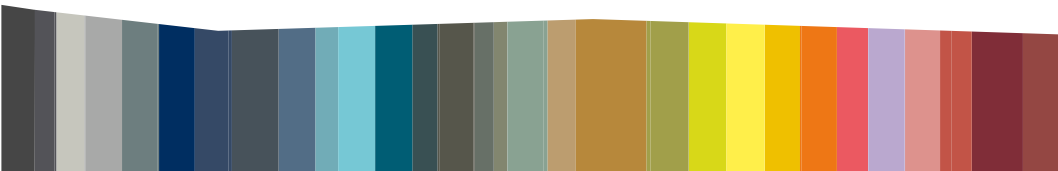

WHAT IS IT THAT MAKES OUR PRODUCTS SO SPECIAL?

The design at EVOC is not merely the conception of products. It's much more the transferral of influences, encounters and experiences, that have inspired us, into our products - in order to enable others to share in the EVOC spirit.

Those indescribable impressions of places and situations, gathered when you travel, that stick with you a lifetime as a specific mood. That's what our "Colours of Traveling" concept is aimed to convey.

COLOURS OF TRAVELLING – NEW COLOUR CARD

WORLD NETWORKING

We are attempting to tell stories and conjure up context by means of specific patterns and elements which you often only discover at a closer glance on the fabrics and product details.

For this season we have reworked our colour palette focussing on natural and earthen hues which we contrasted with strong accent colours. In the new MULTICOLOUR edition we are following a long-standing EVOC tradition to regularly pick specific tones from the new colour scheme and combine them in selected products.

For FW 21/22 we have additionally developed the "World Networking Pattern" which represents all our networks throughout the globe. This pattern concept, on the fabrics with the Multicolour and Steel colourways, signifies the connection to places, communities and people in the world that we have had the privilege to meet through biking and winter sports, as well as the connectivity that can be experienced through shared enthusiasm - irrespective of nationality or cultural background.

Our homage to friendships and mutual influence born out of sports travel.

COLOURS OF TRAVELLING

Every corner of the world has its own colour scheme - and the special impressions they have made on us on our journeys have inspired the colours we have used for our products.

HIGHLIGHT // TRAVEL

GEAR BAGS- & BACKPACKS

We at EVOC have made this experience time and time again over the years, and to this day we make it - the reason why we keep questioning, developing and perfecting all our products.

Now we are proud to be able to put forward probably the best packaging and transport solutions for sports trips the market has to offer. For your personal gear, as well as your sports equipment - no matter whether you are planning to travel the globe, or just go on quick a weekend trip.

EVERY JOURNEY STARTS WITH PACKING. BEFORE YOU EVEN SET FOOT ON YOUR TRIP, THE ANTICIPATION OF THE UNFORGETTABLE ADVENTURES THAT LIE AHEAD ALREADY TRANSPORTS THE MIND TO YOUR DESTINATION. THIS TRAVEL BUG MAKES THE CHALLENGE OF NOT FORGETTING ANYTHING ALL THE MORE DIFFICULT. AND THIS IS ESPECIALLY TRUE WHEN IT COMES TO SPORTS TRAVEL, WHERE IT IS ABSOLUTELY ESSENTIAL TO HAVE YOUR COMPLETE GEAR AND THE GEAR ALSO HAS TO GET THERE UNSCATHED.

Because we don't tire of constantly improving our products, we have thoroughly reevaluated our entire TRAVEL line for the season 2021/22 and optimized it. In our new GEAR BAGS and BACKPACKS ranges, we specifically focussed on transporting helmets, shoes, protectors, gloves and goggles/glasses. When this type of equipment is organized sensibly, you gain some extra protection from dirt and damage. What is more, safely and intelligently organized equipment can save you a lot of time and nerves on your journeys.

The volume ranges of our GEAR BAGS and BACKPACKS are aligned to the typical sets of gear required for winter sports or biking. This makes the new members of our TRAVEL family convenient all-year helpers with a very broad range of use. So, in future you can be

certain, you have really packed both ski boots, a complete pair of gloves and your entire set of protectors and that your goggles, glasses and helmet will arrive at your destination in one piece, too.

Well padded, ergonomic shoulder straps for a comfortable fit

Can be worn as backpack, with stow-away shoulder straps

Two large main compartments for boots, helmet or clothing as well as a lateral zippered pocket with attachments for smaller equipment items

Separate wet compartment for shoes and a quick-access lateral compartment

Main compartment opens completely with two zippers for easy access

HIGHLIGHT // PROTECTOR BACKPACK

LINE PRO 20

Following our DNA as the leading brand for protector backpacks, we fused a whole new level of protection with the best carrying comfort imaginable into a revolutionary lightweight protector backpack.

KAMTSCHATKA BIG MOUNTAIN – TAM TAM

BIG MOUNTAIN – TAM TAM

Kamchatka is a Russian peninsula specked with snow covered giant volcanos. It is situated in the easternmost corner of Siberia, on the rim of the Bering Sea and is part of the "Ring of Fire" - the belt of volcanos and seismically active sites outlining the entire Pacific Ocean.

Twenty years ago, this wild land of bears and exceptionally harsh nature was the destination of our very first winter expedition. In the mid nineties, we set our minds to becoming the first people to ride down these volcanos on snowboards, but unfortunately it eventually took us until 2000 to get all the required visa to be able to actually travel there.

KAMTSCHATKA
TRIP HISTORY

What was in store for us when we arrived was probably the most extreme snowboard trip we had ever been on and the one that really took us to our limits.

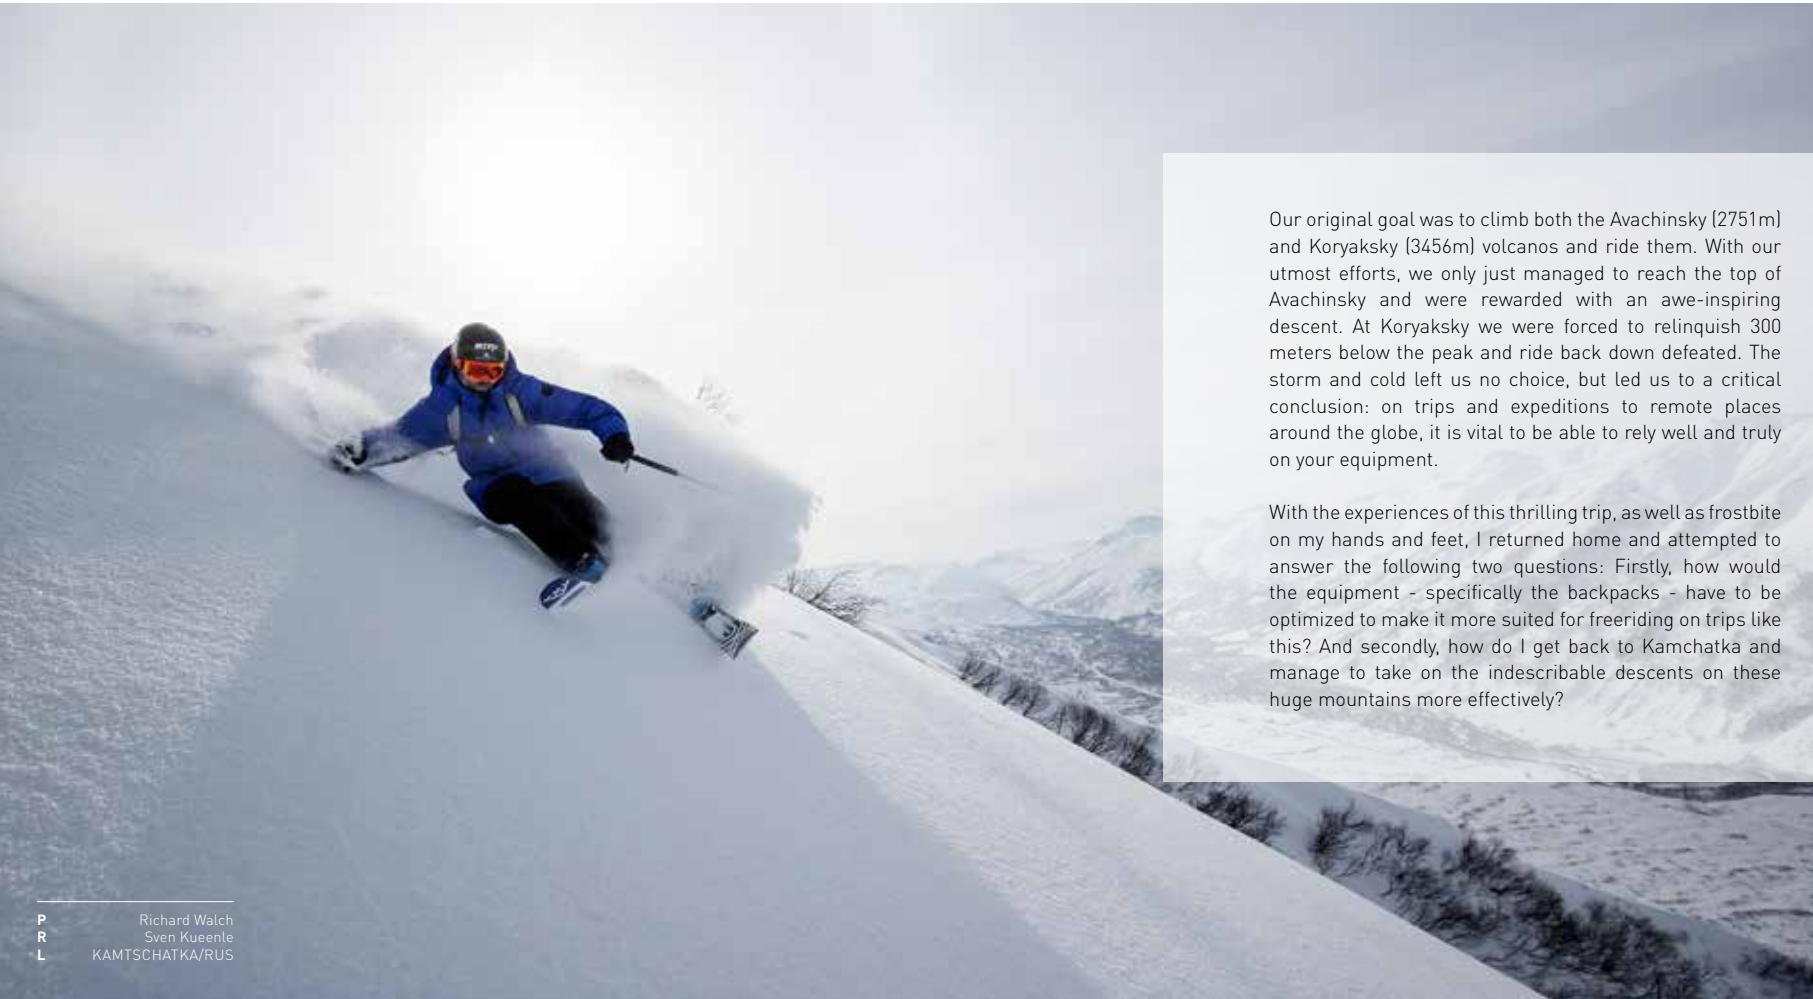

Once we reached our destination after a days-long, adventurous and tedious journey, we were confronted with a situation that we simply couldn't have imagined. This winter trip was rapidly developing into a serious expedition with everything that goes with it: a base camp with tents in the snow, laborious gear transport in wonky lorries and on ancient snow mobiles. Then followed hours-long snow shoe marches on seemingly endless volcano ridges with subsequent technical and steep sections requiring the use of ice axes and crampons. And all this in extreme weather conditions with storms and severely cold temperatures. Frankly, it had already been an impossible task from the outset to attempt climbing the peaks of these volcanos at this time of year. To make matters worse, our equipment was just not capable to persist in these adverse conditions. Never before in our lives had we experienced cold like this! Handling our gear in the snow and storm also didn't work as planned, the backpacks were inadequate and the attachments for the boards and ice axes weren't able to sustain their load reliably - some snapped, others weren't firm enough. We were in a constant struggle with our equipment and in light of the harsh temperatures this increasingly became a safety issue.

P Bernhard Spöttel
R EVOC Crew
L KAMTSCHATKA/RUS

KAMTSCHATKA
BIG MOUNTAIN – TAM TAM

P Richard Walch
R Bene Mayr & Sven Kueenle
L KAMTSCHATKA/RUS

Our original goal was to climb both the Avachinsky (2751m) and Koryaksky (3456m) volcanos and ride them. With our utmost efforts, we only just managed to reach the top of Avachinsky and were rewarded with an awe-inspiring descent. At Koryaksky we were forced to relinquish 300 meters below the peak and ride back down defeated. The storm and cold left us no choice, but led us to a critical conclusion: on trips and expeditions to remote places around the globe, it is vital to be able to rely well and truly on your equipment.

With the experiences of this thrilling trip, as well as frostbite on my hands and feet, I returned home and attempted to answer the following two questions: Firstly, how would the equipment - specifically the backpacks - have to be optimized to make it more suited for freeriding on trips like this? And secondly, how do I get back to Kamchatka and manage to take on the indescribable descents on these huge mountains more effectively?

P Richard Walch

L & Holger Feist
KAMTSCHATKA/RUS

At the time it wasn't even conceivable that some day, with EVOC, I would have my own bag and backpack company.

Now, 20 years later, I'm finally back. The sight of these breathtaking and majestic volcanos never really left me. And it remains as ineffable as ever...

But contrary to the first time, the journey there is much less preposterous and thanks to EVOC we now also have the right equipment. The landscape and the extreme weather conditions are unchanged and transport still

takes place in lorries, but these can now automatically adapt their tyre pressure to the snow conditions and the luggage is mounted securely on the roof in sturdy transport bags. Instead of tents, we now sleep in lodges and we have helicopter support to get up the volcanos.

Consequently we can thoroughly concentrate on riding the endless couloirs that reach from the peaks right down to the sea. It's an incredible experience, after a thousand meters of decent, to take your last couple of turns when

you're virtually on the beach. However, now, topics like safety and risk management have gained a new level of significance, because we are way more downhill oriented than 20 years ago. What are the snow conditions and can we assess and manage the avalanche risk during our descent? Which chute should be ridden where? In this regard, our equipment has also changed substantially and features a lot of new safety components: our backpacks are now equipped with avalanche airbags and integrated back protectors, they are very lightweight as well as ergonomic and can be easily wielded with gloves in any situation. Boards and skis are also quick and simple to attach and always remain firmly in place. This is vital in the hiking and

climbing sections when getting to the entry of your runs. This time we are also luckier: the conditions are excellent and we are able to ride lines that we could only dream of 20 years ago. Even though it is cold, there is fresh snow and practically no wind. We take full advantage of this situation!

This time we ride all the lines we could only marvel at from a distance when we were here before. Steep chutes, vast open faces, slopes cut off by cliffs and cornices for amazing cliff drops. It simply couldn't get any better than this! On the last day, we are standing on the peak of the 2173m Vilyuchinsky volcano when I come full circle: we gaze upon the vast expanses of the Pacific Ocean, the evening sun

reflecting from its surface, and to the north lie "our" two mountains Avachinsky and Koryaksky that we battled so long ago.

This time everything worked out perfectly and we are super stoked. The fact that we are here with the equipment

we developed ourselves makes me especially proud. This is something that I wouldn't have dared to imagine 20 years ago.

For me, this trip was a long-held dream come true.

PROTECTOR BACKPACKS TECHNOLOGY

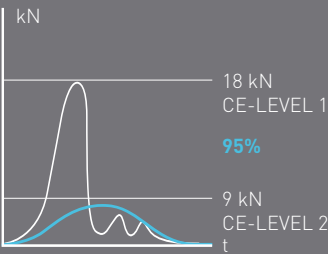

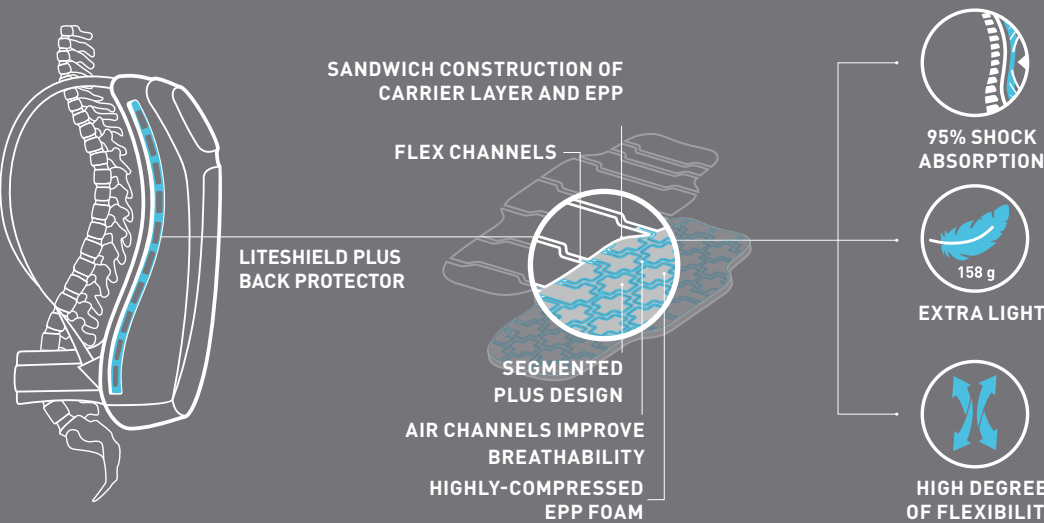

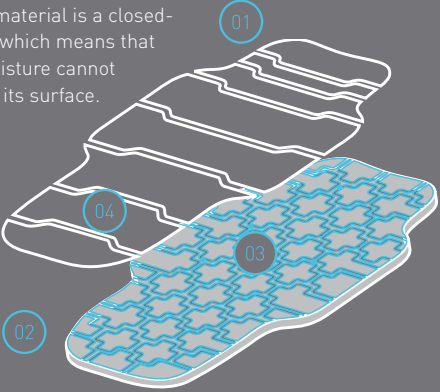

LITESHIELD PLUS BACK PROTECTOR

Even though this new back protector is extremely light, flexible and non-temperature-sensitive, it offers superior impact resistance and energy absorption. The 2-component sandwich construction **01** consists of a combination of expanded polypropylene and a TPU carrier layer. The expanded polypropylene pellets are brought into shape under high pressure and steam and simultaneously bonded with the carrier layer - without the use of adhesives or other solvents. The highly-compressed EPP foam **02** protects the chest, lumbar spine and coccyx perfectly. The side facing your back is comprised of smaller cross-shaped portions **03** (SEGMENTED PLUS DESIGN). This construction creates numerous ventilation channels that provide improved air circulation. Simultaneously, these segments offer a vast range of motion in all directions: the cross-shaped protector elements can move independently. This degree of flexibility allows the protector to sit tight in any position and hereby ensures not only a higher degree of protection, but also improved comfort.

The flexible, tear-resistant TPU support layer on the topside keeps the protector in shape. **04** The stepped, horizontal flex lines enable the LITESHIELD PLUS BACK PROTECTOR to bend so that it sits perfectly on your back in any situation.

The EPP material is a closed-cell foam which means that dirt or moisture cannot penetrate its surface.

LITESHIELD PLUS BACK PROTECTOR

tuev-sued.de/ps-zert

SIZES

CE-NORM EN 1621-2 + TÜV/GS

Materials and protective functions have been tested and certified by TÜV SÜD, according to EU regulation 2016/425 for personal protective equipment (PPE), category 2. IN ADDITION, they have been certified in respect of product safety by TÜV/GS.

CE EN 1621-2 REQUIREMENTS

With a residual force value of below 9 kN, the EVOC LITESHIELD BACK PROTECTOR achieves a damping effect that is almost double than required. This means that about 95% of the impact force is absorbed! CE-Norm proved:

FREE PROTECTOR CRASH REPLACEMENT

As a special service, we offer the FREE PROTECTOR CRASH REPLACEMENT for all EVOC back protectors. Just like helmets, our back protectors are a part of your personal safety gear and intended to protect vital body parts. After a serious crash we, therefore, strongly recommend replacing the protector as a precaution.

PROTECTOR BACKPACKS TECHNOLOGY

LITESHIELD PLUS SYSTEM

Lightweight design, maximum protection and great comfort, these are the defining characteristics of the system revolving around the new LITESHIELD PLUS back protector. The full-back protector made of moisture repellent, closed-cell EPP features an integrated coccyx protector, hereby maximizing the protected area.

The segmented Plus-Design enables all the individual elements to move freely, hereby offering flexibility in all directions so the back protector doesn't impair your mobility. Aside from back protection, the wide hip wings and ergonomic shoulder straps provide optimum load distribution close to the body's centre of gravity and excellent fit.

BODY HUGGING

BODY HUGGING

The distinguishing feature of EVOC's "Body Hugging" fit is that the backpack's centre of gravity is positioned as close to the body as possible, and the load is distributed over a large area and transferred to the hips.

Optimised linking of the shoulder straps and the wide hip wings that "grow out" of the back part ensure that the backpack remains firmly in position during any kind of activity – for more comfort and control.

AIRO FLEX

AIRO FLEX

AIRO FLEX is an extremely sturdy material that is both permeable and flexible. We use it for our top-quality hip belts to ensure optimum load

transfer to the hips, with simultaneous maximum ventilation – for utmost carrying comfort.

AVALANCHE BACKPACKS//

When you are in the mountains in wintertime, there is no place for compromises. Your gear needs to work fully reliable - we know this from our history.

Because of this we are more than proud to offer the next level in safety by adding an avalanche airbag ready freeride- and backcountry backpack series to our line.

BASICS & UPDATES//

Avalanche safety and impact protection:

avalanche airbag backpack with integrated back protector.

The new LINE R.A.S. PROTECTOR - available in two capacity sizes - adds approved back protection to our MAMMUT R.A.S.-READY backpack line.

150 l, 700 g, 20 x 30 x 11cm

The Removable Airbag System 3.0 is an avalanche airbag system based on a square, brightly-colored airbag that deploys behind the wearer's head within seconds. The new system is safe and easy to use. It is even lighter and smaller than before and can be attached to all Removable 3.0-compatible backpacks.

BACKPACK WITH INTEGRATED LITESHIELD BACK PROTECTOR

LITESHIELD BACK PROTECTOR

The EVOC LITESHIELD BACK PROTECTOR combines maximum protection against falls and a feather-light, highly effective construction with a great deal of flexibility. At the same time, it is completely impervious to temperature. As is the case for most sport helmet manufacturers, we use an EPS

construction, although ours is specifically adapted to back protection requirements by means of a segmented, multi-layer approach. Besides featuring excellent shock-absorbing properties, this protection concept enables fall damage to be identified immediately, so that the protector can be individually replaced.

CE-NORM EN 1621-2 + TÜV/GS

Materials and protective functions have been tested and certified by TÜV SÜD, according to EU norm EU2016/425 for personal protective equipment (PPE), category 2. IN ADDITION, they have been certified in respect of product safety by TÜV/GS.

CE EN 1621-2 REQUIREMENTS

With a residual force value of only 9.75 kN, the EVOC LITESHIELD BACK PROTECTOR achieves a damping effect that is almost double than required. This means that about 95% of the impact force is absorbed! CE-Norm proved:

PROTECTED AREA

SIZES

TEMPERATURE RANGE

WATER TEST

DIRECTIONS FOR USE

ADDITIONAL TÜV/GS REQUIREMENTS

- Overhead stability test at full load
- Adjustment options
- Chemicals: Test of 18 harmful substances
- Independent inspection body
- According to the German Product Safety Law (ProdSG)
- Annual onsite product inspection

PROTECTOR BACKPACKS AVAILABLE IN 3 SIZES

S, M/L, XL, depending on upper body length. EVOC offers more than 100 protector backpack models in all sizes and colours!

FREE PROTECTOR CRASH REPLACEMENT

EVOC now offers a special customer service with the **FREE PROTECTOR CRASH REPLACEMENT** of all PROTECTOR BACKPACKS and PROTECTION WEAR products. Like helmets the LITESHIELD PROTECTOR is part of your personal protective equipment and protects vital parts of your body. It should be replaced after a serious crash.

AVALANCHE BACKPACKS TECHNOLOGY

NEUTRALITE SYSTEM

Our NEUTRALITE SYSTEM stands for a neutral and light carrying feeling of our backpacks.

The weight distribution follows the concept of body hugging to keep the pack in position – even during action-loaded

manoeuvres: Via segmented and strategically positioned back padding elements the load is transferred through well padded, ergonomically shaped shoulder straps onto a wide hip belt to the body's centre of gravity.

MAMMUT AIRBAG SYSTEM

Removable Airbag System 3.0: In the event of an avalanche, pull the deployment handle to inflate the avalanche airbag. This increases the chance to stay on the surface of the snow. By incorporating MAMMUT's

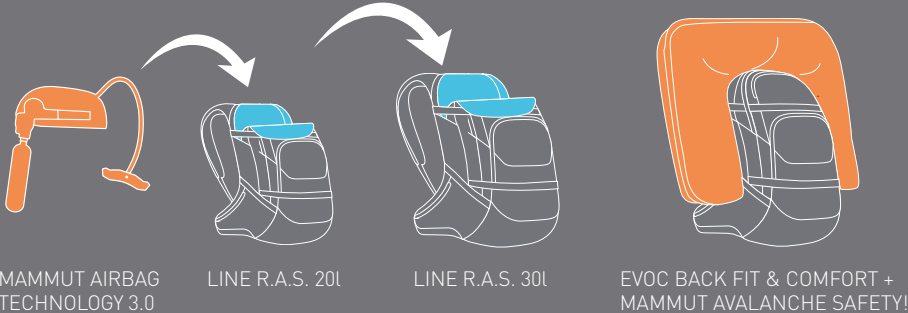

Airbag Technology 3.0, you now have a pack that combines EVOC's outstanding standard in pack design with one of the lightest and most flexible airbag systems.

BODY HUGGING

BODY HUGGING

The distinguishing feature of EVOC's "Body Hugging" fit is that the backpack's centre of gravity is positioned as close to the body as possible, and the load is distributed over a large area and transferred to the hips.

Optimised linking of the shoulder straps and the wide hip wings that "grow out" of the back part ensure that the backpack remains firmly in position during any kind of activity – for more comfort and control.

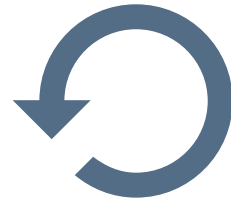

BACKPACKS//

Versatile backpacks for one- or multi-day tours on or off groomed slopes.

- Perfect fit on the back
- Excellent load distribution
- Specific attachment options for their range of use

BASICS & UPDATES//

We have completely redesigned our touring backpack series PATROL and further optimized it with regard to weight, durability and ergonomics. This will provide even more comfort and functionality on tour.

- New, more durable upper fabric (Taslan)
- Lighter, more tear, abrasion and water resistant
- Improved, ergonomic shoulder straps for increased comfort
- Optimized ski/snowboard attachment system
- Redesigned separate compartment with quick access to avalanche equipment and climbing skins

BACKPACKS TECHNOLOGY

NEUTRALITE SYSTEM

Our NEUTRALITE SYSTEM stands for a neutral and light carrying feeling of our backpacks.

The weight distribution follows the concept of body hugging to keep the pack in position – even during action-loaded

manoeuvres: Via segmented and strategically positioned back padding elements the load is transferred through well padded, ergonomically shaped shoulder straps onto a wide hip belt to the body's centre of gravity.

AIR CIRCULATION

AIR CIRCULATION is used in all our backpacks, as it ensures optimum ventilation while preventing excessive cooling down of the sensitive kidney area, even during extremely high-strain activities or intensive perspiration.

Constant, free air circulation is guaranteed as a result of the vertical air channel.

Gaps along the sides of the channel allow additional air to escape.

BODY HUGGING

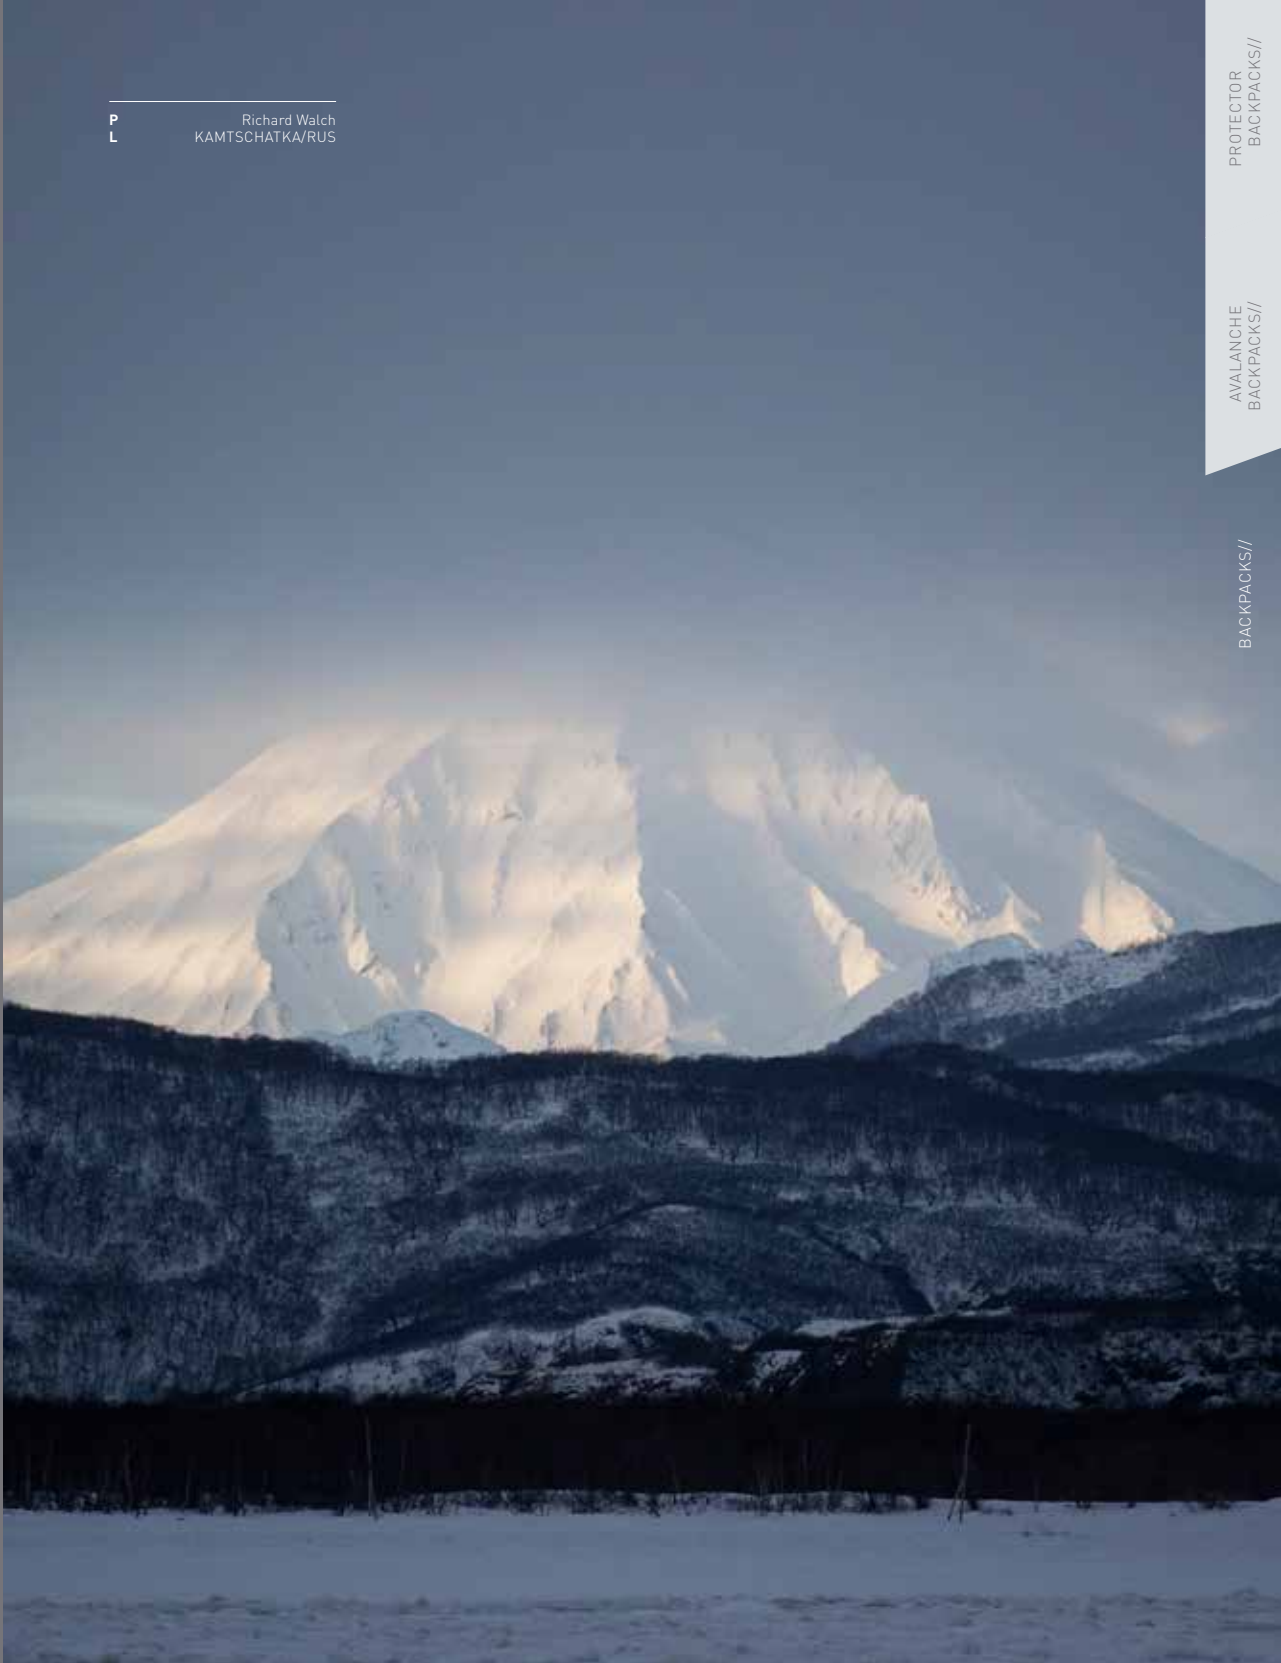

BODY HUGGING

The distinguishing feature of EVOC's "Body Hugging" fit is that the backpack's centre of gravity is positioned as close to the body as possible, and the load is distributed over a large area and transferred to the hips.

Optimised linking of the shoulder straps and the wide hip wings that "grow out" of the back part ensure that the backpack remains firmly in position during any kind of activity – for more comfort and control.

AIR PAD SYSTEM

The AIR PAD SYSTEM with its arrangement of 5 ventilation channels (1 main channel and 4 sub-channels) and 6 strategically positioned 3D air mesh pads offers the optimal combination of a close, load-neutral fit and back ventilation.

The shoulder straps with air mesh and large ventilation holes ensure that the pack remains securely in place in any situation, and provide optimal breathability on the shoulders as well.

BRACE LINK

BRACE LINK

The BRACE LINK adjusts the shoulder belts perfectly to the width of the athletes shoulders.

centre of gravity, while at the same time the contact areas with back and shoulders are minimized.

This automatically adjustment endorse the load transfer to the body's

Even wearing a neck brace is possible through the BRACE LINK.

SKATE WHEELS

The durable and sturdy skate wheels ensure an easy and smooth pull of your travel product on ground surfaces anywhere from Airport tiling to concrete rubble.

Due to the flexible main material, rolling sounds are reduced to a minimum. For your convenience the skate wheels are replaceable.

EVA MOLDED BOTTOM

THE EVA MOLDED BOTTOM is a specially developed construction that maximises the stability of our WORLD TRAVELLER, TERMINAL

BAG and TERMINAL ROLLER while reducing the weight by 20% at the same time.

TECHNOLOGY

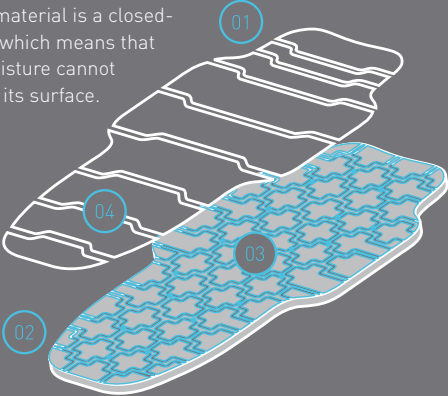

LITESHIELD PLUS BACK PROTECTOR

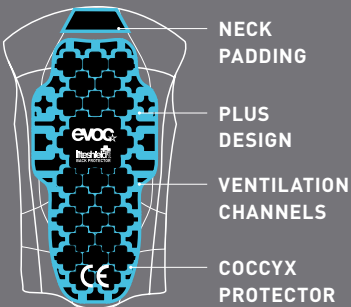

Even though this new back protector is extremely light, flexible and non-temperature-sensitive, it offers superior impact resistance and energy absorption. The 2-component sandwich construction **01** consists of a combination of expanded polypropylene and a TPU carrier layer. The expanded polypropylene pellets are brought into shape under high pressure and steam and simultaneously bonded with the carrier layer - without the use of adhesives or other solvents. The highly-compressed EPP foam **02** protects the chest, lumbar spine and coccyx perfectly. The side facing your back is comprised of smaller cross-shaped portions **03** (SEGMENTED PLUS DESIGN). This construction creates numerous ventilation channels that provide improved air circulation. Simultaneously, these segments offer a vast range of motion in all directions: the cross-shaped protector elements can move independently. This degree of flexibility allows the protector to sit tight in any position and hereby ensures not only a higher degree of protection, but also improved comfort.

The flexible, tear-resistant TPU support layer on the topside keeps the protector in shape. **04** The stepped, horizontal flex lines enable the LITESHIELD PLUS BACK PROTECTOR to bend so that it sits perfectly on your back in any situation.

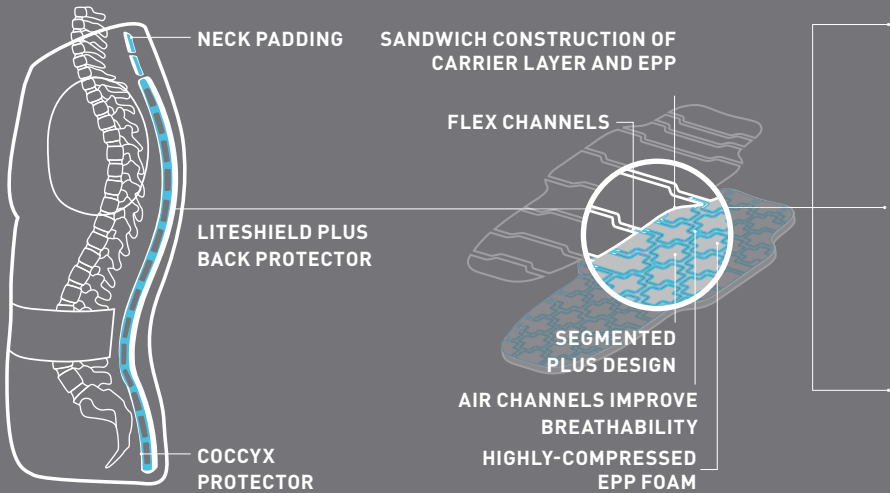

The EPP material is a closed-cell foam which means that dirt or moisture cannot penetrate its surface.

COMPOSITION OF PROTECTOR

Back protector certified to EN 1621-2, level 2

95% SHOCK
ABSORPTION

168 g
EXTRA LIGHT

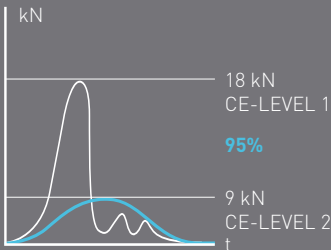

HIGH DEGREE
OF FLEXIBILITY

CE STANDARD EN 1621-2

Materials and protective properties have been tested and certified by the accredited test laboratory to EU regulation 2016/425 for personal protective equipment, category 2.

LITESHIELD PLUS BACK PROTECTOR

CE 1621-2 REQUIREMENTS

With a residual force value of only 8,23 kN, the LITESHIELD PLUS back protector reached a level 2 damping effect. This means that approximately 95% of the impact force is absorbed! For CE standardisation, the following points are tested:

PROTECTED
AREA

SIZES

TEMPERATURE

DIRECTIONS
FOR USE

PROTECTION WEAR
TECHNOLOGY

01 LITESHIELD PLUS

- Excellent impact protection for the back (CE certified)
- Extra lightweight - just 168 g
- Non-temperature-sensitive (range from -20° - +23° C)
- Adapts flexibly the body to provide optimal protection
- Ventilation channels for great air circulation

02 SHOULDER PROTECTORS

- High-level impact protection for the shoulders (CE-certified to EN 1621-1)
- Flexible and adaptive design made of visco-elastic foam by SAS-TEC
- 3D preformed for comfort and fit

03 POLYGIENE ODOR CRUNCH®:

- Active protection from bad smells
- Better durability through reduced wash cycles
- Silica particles remove odours naturally
- Consists of 95% stream water and 5% silica
- Produces zero waste

04 CHEST PROTECTOR

- Crash and impact protection for the chest (Certified to EN 1621-3, level 1)
- Flexible and adaptive design made of visco-elastic foam by SAS-TEC
- One-piece construction for maximum protection
- Removable

05 HIP PADDING

- Made of viscoelastic foam for extra flexibility
- Perforated for improved breathability

06 FLEXIBLE, LATERAL ZIPPERS FOR INCREASED MOBILITY

- Highest YKK quality
- FIDLOCK magnetic buckles for quick and easy fastening of the shoulder straps, even with gloves.

FREE PROTECTOR
CRASH REPLACEMENT

As a special service, we offer the FREE PROTECTOR CRASH REPLACEMENT for all EVOC back protectors. Just like helmets, our back protectors are a part of your personal safety gear and intended to protect vital body parts. After a serious crash we, therefore, strongly recommend replacing the protector as a precaution.

ENGINEERED IN GERMANY

All EVOC products are engineered in Germany to ensure the highest standards of performance, durability and quality.

PRODUCTION FACILITIES

Our products are made exclusively by handpicked manufacturers with a long-term reputation for delivering quality consistently. We ensure the quality of our products through regular on site visits and stringent quality control.

MATERIALS

All the materials we employ are precisely adapted to the specific requirements of each individual product and its range of use. Functionality, protection and durability are parameters that play a decisive role in our selection.

We work with the best suppliers worldwide and only purchase the highest-quality materials. If materials or components do not meet our expectations, we develop them ourselves.

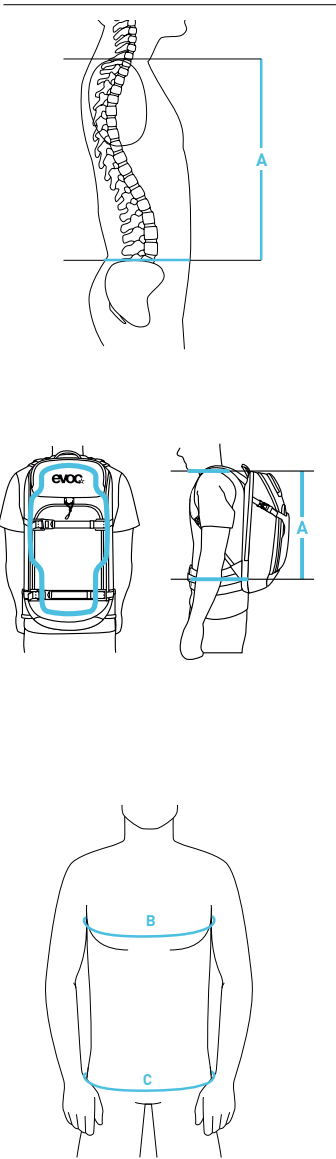

EXPERIENCE AND FEEDBACK

Our staff of former professional athletes and ambitious riders with strong roots in biking and snow sports, has long-standing experience in manufacturing sports equipment and constantly

use our equipment around the world. Every season our products are also tested by world-class athletes who take our stuff to the limit.

The constant testing and resulting feedback ensure that every feature of an EVOC product has been refined to perfection by the time you hold it in your hands.

PLAN
REVISE

HOW TO MEASURE

Torso length **A** is critical for ensuring optimal protection. When calculating your own torso length, measure from the top of your hip to your shoulder.

PROTECTOR BACKPACKS

LINE PRO // LINE R.A.S. PROTECTOR

SIZE	TORSO LENGTH A	HIP BELT AMOUNT
S	38 - 42 cm	76 - 105 cm (flex)
M/L	44 - 48 cm	84 - 115 cm (flex)
XL	49 - 53 cm	88 - 117 cm (flex)

PROTECTION WEAR

MEN	TORSO LENGTH A	CHEST AMOUNT B	HIP AMOUNT C
S 44/46	38 - 43 cm	87 - 93 cm	92 - 97 cm
M 48/50	44 - 47 cm	96 - 102 cm	98 - 104 cm
L 52/54	47 - 50 cm	101 - 109 cm	106 - 111 cm
XL 56/58	51 - 56 cm	110 - 118 cm	112 - 120 cm
WOMEN	TORSO LENGTH A	CHEST AMOUNT B	HIP AMOUNT C
S 34/36	38 - 40 cm	84 - 88 cm	85 - 96 cm
M 38/40	40 - 43 cm	87 - 95 cm	96 - 102 cm
L 42/44	44 - 50 cm	95 - 102 cm	102 - 109 cm
KIDS	TORSO LENGTH A	BODY HEIGHT	
JS	27 - 32 cm	122 - 130 cm	
JM	31 - 37 cm	130 - 143 cm	
JL	38 - 43 cm	143 - 164 cm	

MATERIALS

We carefully select exclusive materials for our products or tailor them exactly to our requirements.

For use in our products, materials must be lightweight as well as exhibit optimum material properties. Our high standards in terms of product functionality and quality are the most important indicator in this regard.

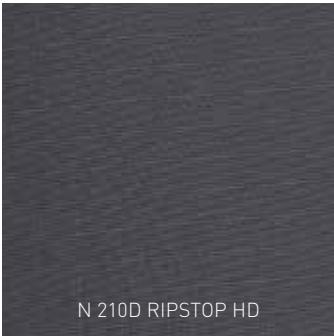

OUTER MATERIALS

The requirements for perfect backpack and bag outer material can be summarised into four characteristics: durability, abrasion resistance, water resistance and weight. Depending on the purpose of the product, we use various types of nylon with different weaves and thicknesses that optimally support the function of the product.

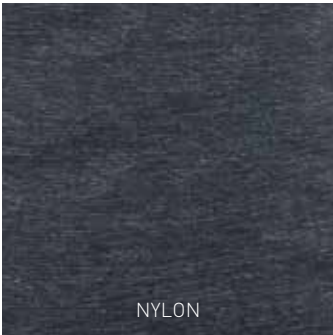

TASLAN

Our high-end fabric, that sports an excellent low weight/stability ratio. Thanks to its special weave using thick and thin yarn, it is particularly tear-resistant and retains its shape, while the PU coating makes it completely waterproof.

N 210D RIPSTOP HD

Extremely lightweight and yet abrasion-resistant, this fabric with ripstop construction and highdensity fabric boasts and tear resistance. The crosshatch weave pattern ensures that potential tears do not easily spread. The coating makes the nylon water-repellent.

NYLON

Extremely abrasion resistant yet super lightweight: the new Nylon material made from a high-quality nylon-polyester mix with PU coating on the inside endures even the harshest abuse. However, its surface has a soft feel and a slick matte look.

N 420D HD

This nylon is ideal for use wherever a high degree of durability and abrasion resistance is required, and it is super lightweight, too. The robust and high-quality fabric is finished with a coating on the inside for water resistance.

N 210 TAFFETTA

We use this light, durable and completely waterproof fabric for our rain covers, in particular.

P 600D

Where usage involves high wear and tear, e.g. in the case of the bike travel bag or bag bases, we use this tear-resistant, lightweight and water-resistant polyester fabric. Most recently, it is finished with a TEFLON COATING so even dirt simply rolls off the fabric.

TARPAULIN 1000D (EVOC TARPAULIN)

Extremely temperature-resistant and completely waterproof – these are the properties of this high-quality PVC-free EVOC tarpaulin. Perfect for all heavy-duty EVOC products.

CORDURA 1000D

This high-strength cordura fabric is practically indestructible. Durability and protection are at the forefront with this material, but it also scores high points for low weight. Water-repellent thanks to the coating.

MATERIALS

FINISHING MATERIALS

MESH

During exercise, heat is generated, which should be wicked away from the body through appropriate ventilation. Depending on the scope of application, we use different, highly efficient mesh fabrics that ensure maximum air circulation, yet do not absorb moisture:

- AIR MESH
- 3D AIR MESH
- AIRBREATH MESH
- HONEYCOMB MESH

NEOPRENE

Neoprene exhibits flexibility and stability at the same time, and therefore offers exceptionally good grip – over a wide temperature range, and in wet and dry conditions. This makes the material our number one choice for our hip belts, which are possibly the most important backpack components for distributing load towards the body's centre of gravity for maximum comfort.

AIRO FLEX

With its origin in medical device technology, this extremely sturdy premium material has everything to justify its use in our top-quality hip belts: exceptionally flexible, completely air-permeable, and yet sufficiently sturdy to keep the backpack in place with the load as close as possible to the body's centre of gravity.

TREATMENTS & FINISHES

Our materials are finished with high-quality coatings that extend their lifespan and enhance the quality of our products. The coatings used on our lightweight outer materials provide protection from dirt and stains and prevent moisture from penetrating.

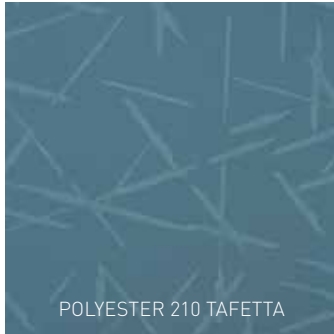

POLYGIENE® ODOR CRUNCH
Equipment that prevents odour. This feat is made possible by modified silica particles that absorb molecules containing sulphur or nitrogen, break them down into smaller odourless molecules and hereby remove the unpleasant smells.

- PU COATING
- KEVLAR COATING
- DURABLE WATER REPELLENCY

LININGS

By linings we mean our lining and inner materials that are used on our bags and backpacks. We vary these, too, according to the intended use for the bag or backpack, and ensure they are colour-coordinated so that the design experience can continue to be appreciated once they are opened up.

POLYESTER 210 TAFETTA

Our TRAVEL Line linings are soft and silky to touch and hold their shape well thanks to the fine web structure of the fabric. Ideal protection for clothing and personal equipment. The extra coating ensures it is robust enough for sporting journeys, too.

ULTRA SONIC

A very soft, velvety and pumped-up 3-layered material. It protects sensitive contents and is therefore used in the laptop compartment of our MISSION PRO.

POLYESTER 200D

Particularly robust and with an extra coating for enhanced resistance to wear and tear, our first choice for tool, hydration bladder and avalanche compartments and the like.

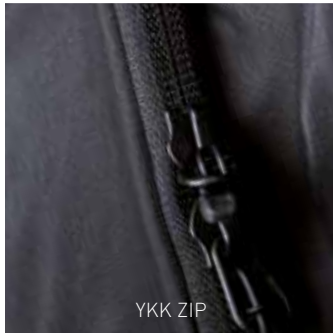

FEATURES & ACCESSORIES

For our products, we only use premium accessories that support their function and add design value. If we cannot find the right accessories for our equipment, we simply develop them ourselves in order to optimally satisfy our expectations.

//EVOC RETAIL PROGRAM

Today, retail is facing completely new challenges.

What consumers expect from brick and mortar shops is a great variety of products and immediate availability. An optimal product presentation and pleasant shopping environment help the customer to make a good purchase decision.

Consistent communication and brand message give the buyer a feel of safety when buying a high quality product.

This is why EVOC offers retailers a specific retail program, including sales promotion concepts and measurements. Adding to the program offer are presentation aids, displays, and sales tools.

Please contact your distributor for more information or write to info@evocsports.com

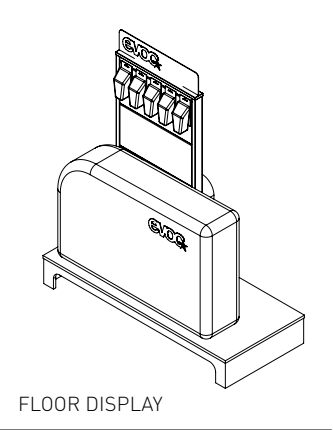

EVOC PROGRAM STORE

The EVOC Retail Program is offering a wide range of individual solutions for brand communication and produkt präsentation.

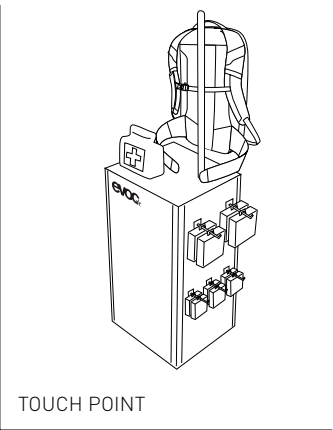

The beautiful display system has been developed in house and is supporting your shop design and visual merchandising.
