## SPRING/SUMMER 2021

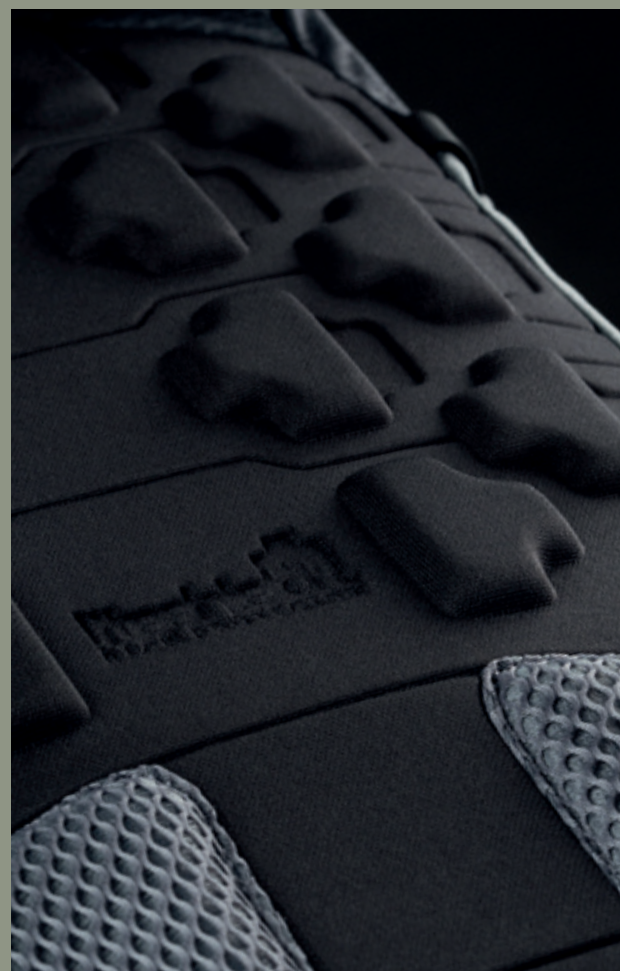

„CHASING TRAILS“ – Next level EVOC protection for ambitious riding - everywhere.

In SS21 EVOC is about **PROTECTION** – on any terrain. Shredding bike parks or riding the most exotic trails in the world: with our new **LITESHIELD PLUS** technology you have superior protection in any situation. Darren Berreclough, an icon in mountain biking, took us on a trip to Bhutan to rock some remote Himalayan trails for an in depth test.

Meanwhile Rampage legend Kurt Sorge took freeriding to a new level, riding some of the most hilariously steep chutes in Canada – well protected with EVOC, of course.

With the experiences of these two international top pros we have the perfect proving ground to raise EVOC protection to a whole new level, too.

Additionally, we have created a special „goody“ for next season, that will make it easy for everybody to become part of the EVOC family...

# THE EVOC STORY

## 50 DESTINATIONS IN 20 YEARS

Over the last 20 years we have travelled to more than 50 destinations. With our mountain bikes or snowboards, always on the search for the best trails and greatest powder runs. We discovered fantastic places and found some amazing downhill runs. But what we couldn't find was equipment that met our needs. So, we began to develop and produce this equipment according to our personal preferences: top-quality, sophisticated products with useful features.

## MILESTONES

## 1999 // AUSTRIA // ARLBERG

During a shoot for a snowboarding video on the Arlberg we experience an avalanche. Fortunately, nobody is trapped, but freerider and product designer Holger Feist crashes on his way through the couloir and injures his back. The cause: the avalanche shovel in his backpack. Holger's immediate conclusion is that a backpack with back protector would probably have prevented that. The idea for a backpack with back protector is born.

## 2000 // TIBET // MOUNT EVEREST BASE CAMP

The idea of a protector backpack could also work for mountain biking. Here too, the risk of falling onto your back is great. Plus, the ergonomics of the bike packs at the time are not really suitable for sporting use. »Like a football on your back!«, was Holger's fed-up conclusion after completing a three-week expedition through Tibet to the Mt. Everest base camp in 2000. The decision is made: There is a better way – we'll do it ourselves. Back in Munich, Holger starts to tinker, stitch and experiment.

1999 2000 2003 2008

## Arlberg, Austria

## Back injury during a snowboarding video shoot

Tibet**

## Dissatisfaction with bike pack ergonomics

## La Paz, Bolivia

First backpack prototype  
on trail + idea for  
BIKE TRAVEL BAG

Hong Kong

First EVOC shop +  
founding of EVOC

## 2003 // BOLIVIA // LA PAZ

The first prototype of the protector backpack is used on the trails around La Paz. And it works perfectly! But the equipment used during this trip highlights a completely different issue: instead of arriving in a carefully packed box, the mountain bike arrives on the belt at the airport in bits and pieces – fortunately without any parts missing! There is no satisfactory solution on the market for transporting bikes either. The trigger for developing the first BIKE TRAVEL BAG – a bag concept thought through to the smallest detail, for safe and convenient transporting of bikes. From the very beginning, the focus is on functionality, convenience, protection and quality, so that no-one would ever have to be annoyed about their equipment again. The protector backpack and bike travel bag are initially only produced for our own trips – and for friends who request them.

## 2008 // HONG KONG

One day the phone rings and Bernd Stucke, friend and long-time travel companion from Hong Kong is on the line. He had taken his bike for service to the legendary »Flying Ball« bike shop in one of the first bike bags. Mr Lee – shop owner and bike expert – is so taken with this bike bag that he immediately orders 50 of them. The first real customer! So, in 2008, Holger Feist and Bernd Stucke found EVOC. Since then, a lot has changed for us, and yet so little.

Quality, functionality and durability are still top priorities to us. And we are rather proud to say that we're also setting trends when it comes to design, comfort and protection. We still travel the world as much as possible with our sports equipment – although, these days, also more and more frequently with our business gear.

We're still testing all products ourselves and are working every day to improve them just that little bit more. Our DNA is in every single product – and in everything we do, we try and convey our passion for sports and travel.

Products from EVOC are consequently always a little more than just items of equipment. EVOC stands for evolution and the concept of high-quality, sporty backpacks, bags and luggage – with a particular focus on proper protection of man and material.

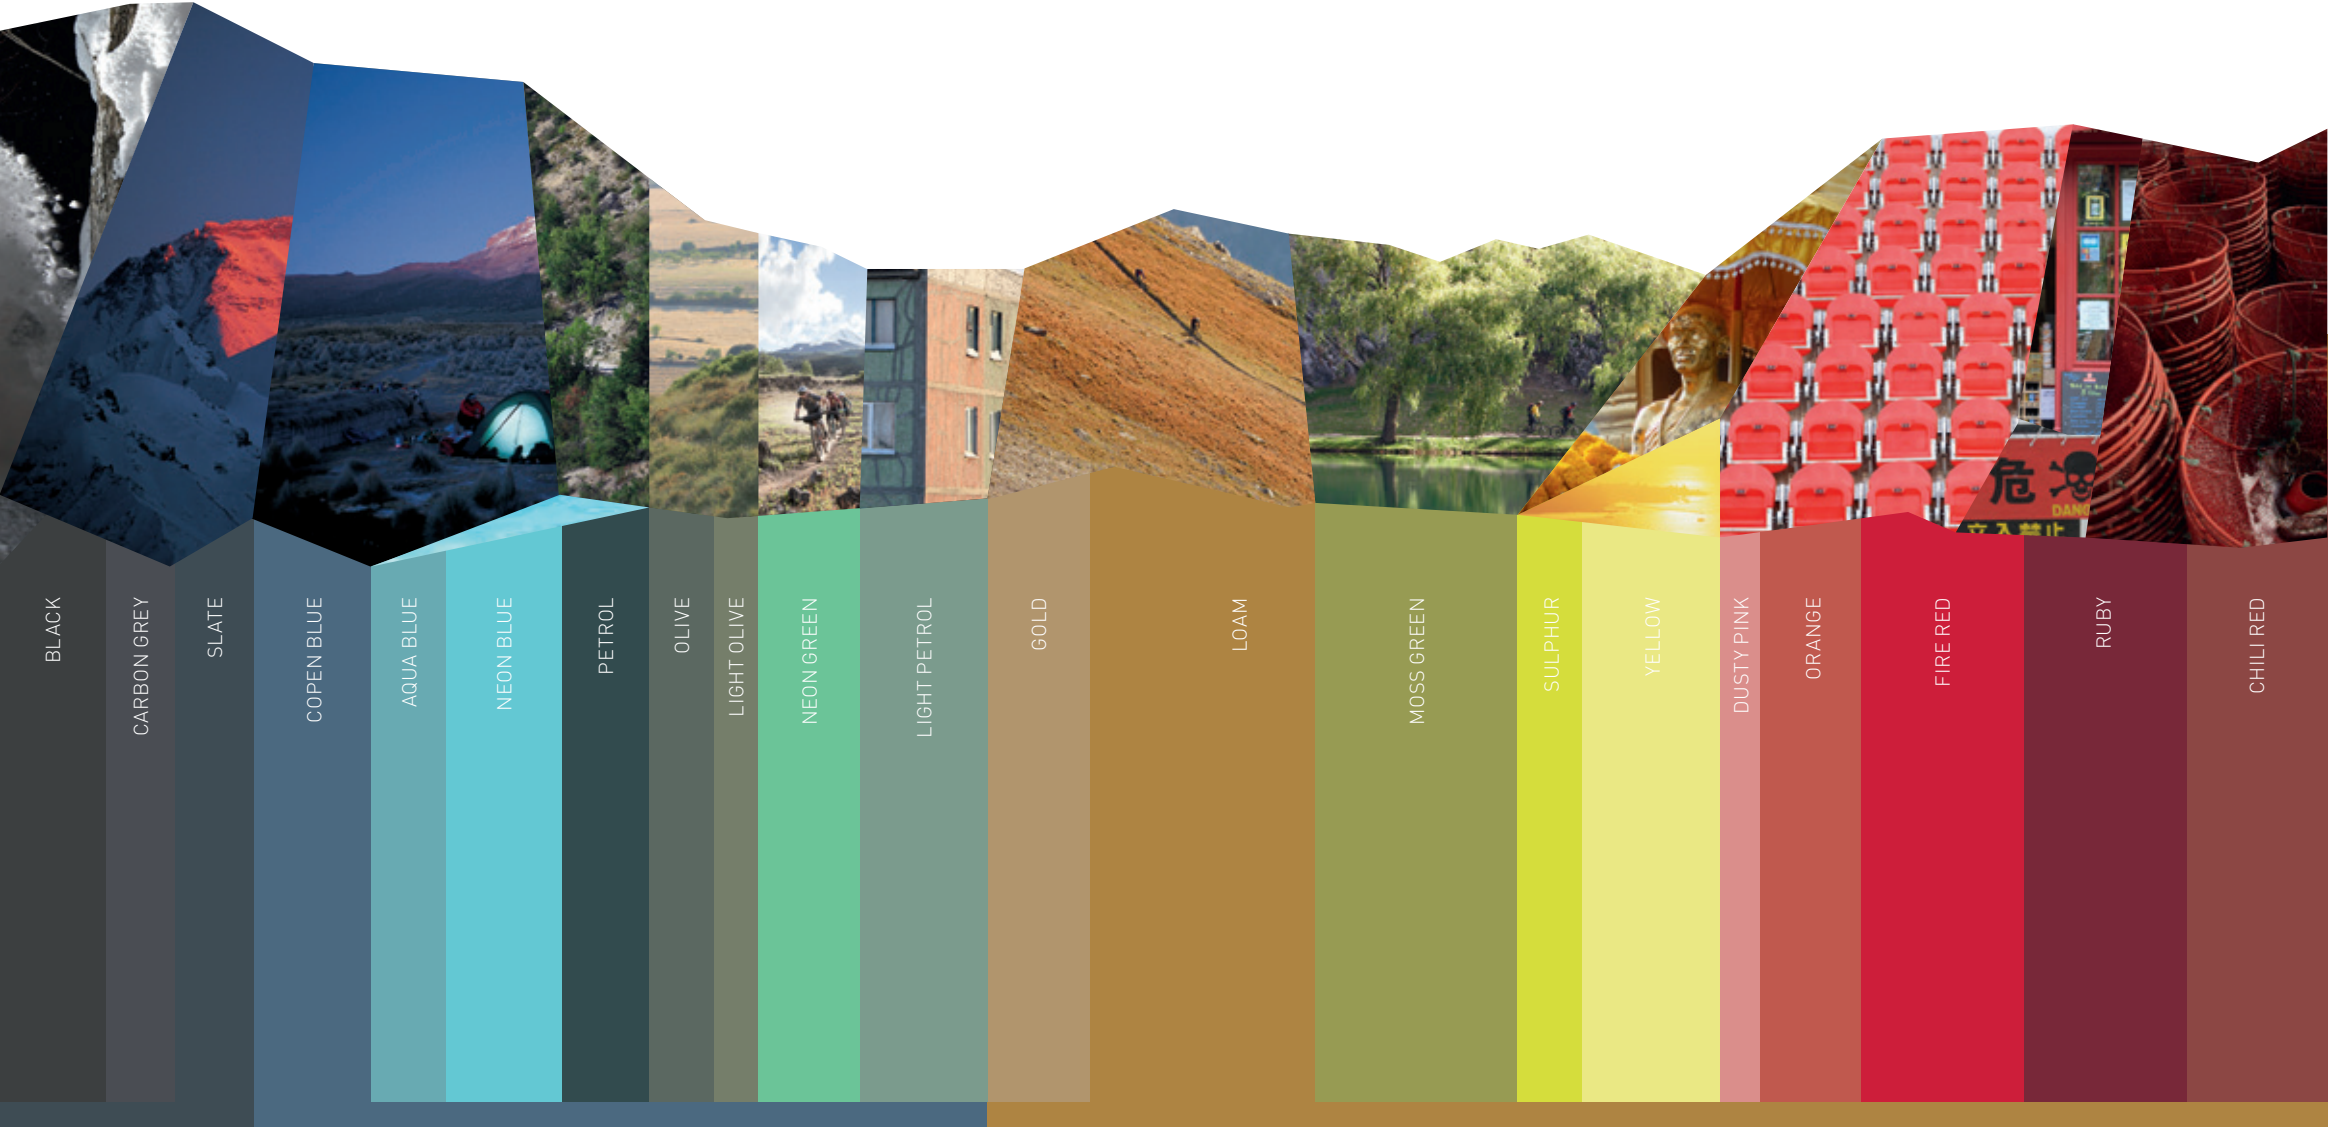

Protect the things you love! Or in short:  
EVOC – PROTECTIVE SPORTS PACKS

**EVOC** 

COLOURS OF TRAVELLING

Every corner of the world has its own colour scheme - and the special impressions they have made on us on our journeys have inspired the colours we have used for our products.

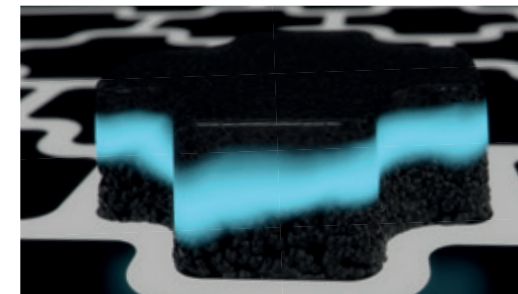

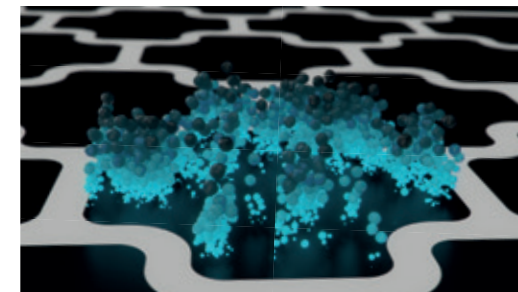

## THIS IS OUR NEW PLUS IN PROTECTION

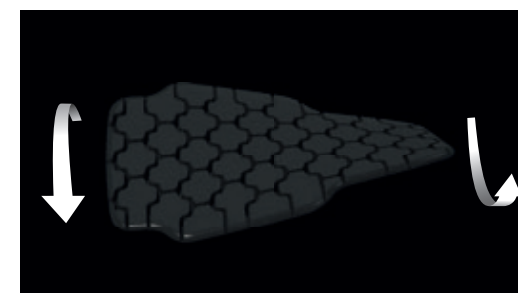

- Next-level protection
- EN 1621-2, level 2 certified
- A maximum of shock absorption and minimum of weight

BASED ON A SEGMENTED PLUS CONCEPT.

EPP PELLETS ARE FORMED UNDER HIGH PRESSURE AND STEAM.

FOR NUMEROUS VENTILATION CHANNELS AND A HIGH DEGREE OF FLEXIBILITY.

BACK PROTECTOR

**CHASING TRAILS // BHUTAN**

Darren Berreclouth's trip was about finding new and exotic trails in the middle of the Himalayan Mountains. He set out in search of the Yeti and what he found was a region rich in culture with ancient local mountain communities and really huge mountains. It proved to be a genuine

expedition including a lot of exploring and adventure with the crew often verging on total exhaustion. But all the hours of bike hiking paid off when they finally discovered and rode some of the most remote trails on the planet. Just what we love here at EVOC!

P Margus Riga  
R Darren Berreclouth & crew  
L BHUTAN/BTN

## EVOC TRIP CHASING TRAILS // BHUTAN

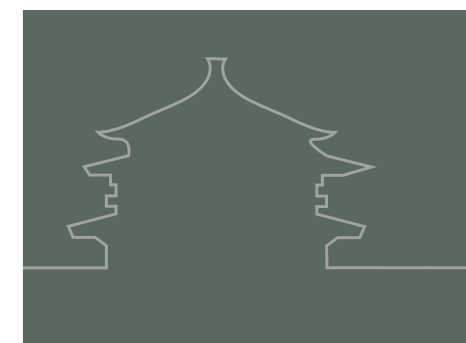

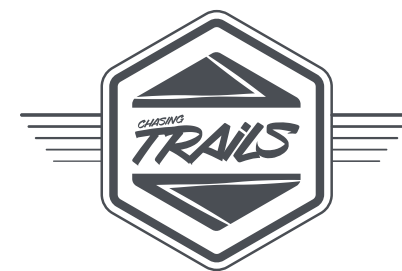

This was also the perfect initiation for our TRAIL PRO series, a new generation of protector backpacks: joining mountain bike legend Darren Berreclough chase technical trails in one of the most mythical and impressive mountain ranges, so remote, you definitely want to use protection!

### ADVENTURE!

It has a different meaning for everyone in every culture, but one element that remains constant is the call of the mountains which is unanimous.

„For me, I have wanted to explore the country of Bhutan for several

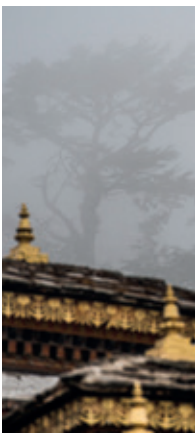

years and the trip lived up to every expectation I had. Even though we didn't find the Yeti, we did have the experience of a lifetime, filled with mind blowing singletracks that went on for hours, amazing culture, wicked cuisine and breathtaking scenery that only The Himalayas

can provide with their sky scraping mountain ridge lines and peaks. I for one definitely recommend this area for anyone that is willing to brave the elements and get outside their comfort zone in search for an epic adventure".

Darren Berrecloth  
Freerider & Trail Explorer

You can watch the movie  
"Chasing The Yeti" about  
this trip here:

# PROTECTOR BACKPACKS//

Every one of our TÜV/GS-certified EVOC PROTECTOR BACKPACKS combines the benefits of an elaborate sports backpack and a fully-fledged back protector. Not only does the pack help prevent injuries from falls, it also boasts a number of useful features, that allow you to concentrate 100% on your sport.

With the revolutionary LITESHIELD PLUS BACK PROTECTOR technology, we have set new standards in protection, lightweight and carrying comfort.

# BASICS & UPDATES//

Backpack and back protector in one, for more safety and comfort on your bike.

# PROTECTOR BACKPACKS TECHNOLOGY

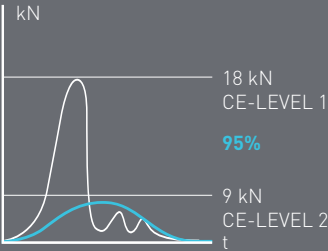

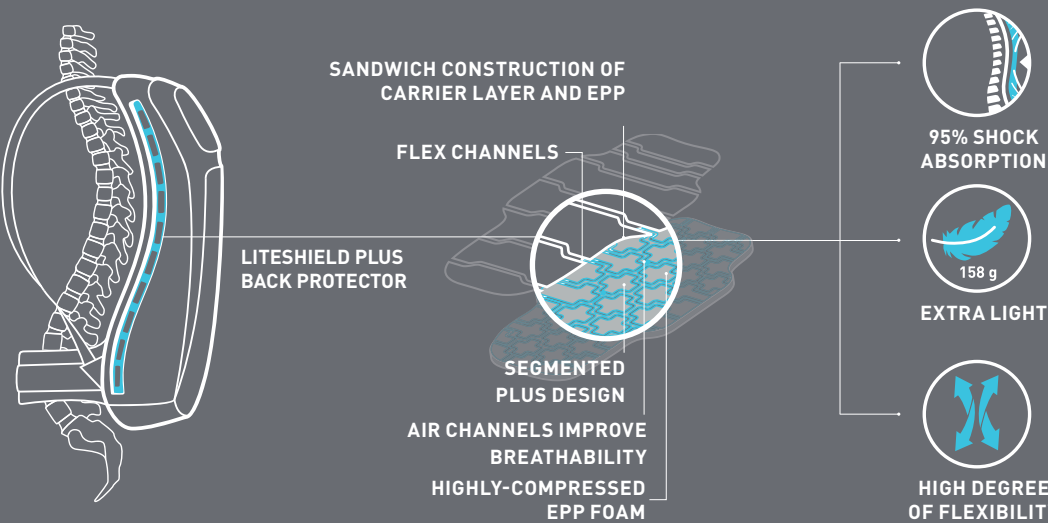

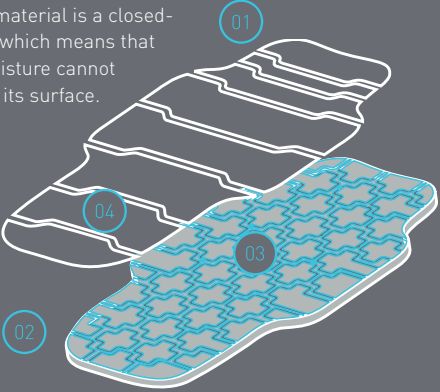

## LITESHIELD PLUS BACK PROTECTOR

Even though this new back protector is extremely light, flexible and non-temperature-sensitive, it offers superior impact resistance and energy absorption. The 2-component sandwich construction **01** consists of a combination of expanded polypropylene and a TPU carrier layer. The expanded polypropylene pellets are brought into shape under high pressure and steam and simultaneously bonded with the carrier layer - without the use of adhesives or other solvents. The highly-compressed EPP foam **02** protects the chest, lumbar spine and coccyx perfectly. The side facing your back is comprised of smaller cross-shaped portions **03** (SEGMENTED PLUS DESIGN). This construction creates numerous ventilation channels that provide improved air circulation. Simultaneously, these segments offer a vast range of motion in all directions: the cross-shaped protector elements can move independently. This degree of flexibility allows the protector to sit tight in any position and hereby ensures not only a higher degree of protection, but also improved comfort.

The flexible, tear-resistant TPU support layer on the topside keeps the protector in shape. **04** The stepped, horizontal flex lines enable the LITESHIELD PLUS BACK PROTECTOR to bend so that it sits perfectly on your back in any situation.

The EPP material is a closed-cell foam which means that dirt or moisture cannot penetrate its surface.

LITESHIELD PLUS BACK PROTECTOR

tuev-sued.de/ps-zert

SIZES

CE-NORM EN 1621-2 + TÜV/GS

Materials and protective functions have been tested and certified by TÜV SÜD, according to EU regulation 2016/425 for personal protective equipment (PPE), category 2. IN ADDITION, they have been certified in respect of product safety by TÜV/GS.

## CE EN 1621-2 REQUIREMENTS

With a residual force value of below 9 kN, the EVOC LITESHIELD BACK PROTECTOR achieves a damping effect that is almost double than required. This means that about 95% of the impact force is absorbed! CE-Norm proved:

After a serious crash we, therefore, strongly recommend replacing the protector as a precaution.

# PROTECTOR BACKPACKS TECHNOLOGY

**liteshield**  
BACK PROTECTOR

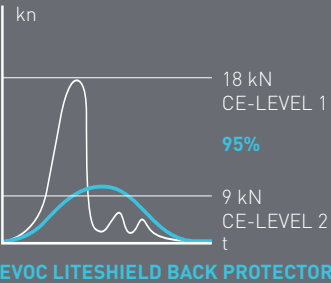

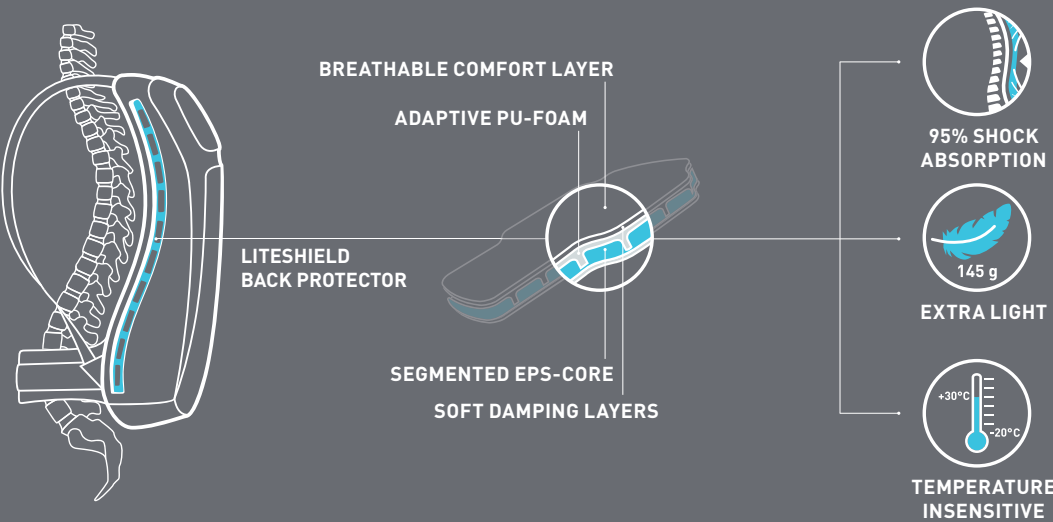

BACKPACK WITH INTEGRATED LITESHIELD BACK PROTECTOR

LITESHIELD BACK PROTECTOR

The EVOC LITESHIELD BACK PROTECTOR combines maximum protection against falls and a feather-light, highly effective construction with a great deal of flexibility. At the same time, it is completely impervious to temperature. As is the case for most sport helmet manufacturers, we use an EPS

construction, although ours is specifically adapted to back protection requirements by means of a segmented, multi-layer approach. Besides featuring excellent shock-absorbing properties, this protection concept enables fall damage to be identified immediately, so that the protector can be individually replaced.

CE-NORM EN 1621-2 + TÜV/GS

Materials and protective functions have been tested and certified by TÜV SÜD, according to EU norm 89/686/EEC for personal protective equipment (PPE), category 2. IN ADDITION, they have been certified in respect of product safety by TÜV/GS.

CE EN 1621-2 REQUIREMENTS

With a residual force value of only 9.75 kN, the EVOC LITESHIELD BACK PROTECTOR achieves a damping effect that is almost double than required. This means that about 95% of the impact force is absorbed! CE-Norm proved:

ADDITIONAL TÜV/GS REQUIREMENTS

- Overhead stability test at full load
- Adjustment options
- Chemicals: Test of 18 harmful substances
- Independent inspection body
- According to the German Product Safety Law (ProdSG)
- Annual onsite product inspection

PROTECTOR BACKPACKS AVAILABLE IN 3 SIZES

PROTECTOR BACKPACKS  
TECHNOLOGY

LITESHIELD PLUS SYSTEM

Lightweight design, maximum protection and great comfort, these are the defining characteristics of the system revolving around the new LITESHIELD PLUS back protector. The full-back protector made of moisture repellent, closed-cell EPP features an integrated coccyx protector, hereby maximizing the protected area.

The segmented Plus-Design enables all the individual elements to move freely, hereby offering flexibility in all directions so the back protector doesn't impair your mobility. Aside from back protection, the wide hip wings and ergonomic shoulder straps provide optimum load distribution close to the body's centre of gravity and excellent fit.

AIRSHIELD SYSTEM

The lattice structured elastomer protector construction provides 360° back ventilation and ergo-dynamic flexibility at the same time, through its hexagonal elements. Directly attached to the protector, a range of 12 elastomer pads with mesh effect

minimize the contact points for optimum breathability. In combination with mesh padded, ergonomic shoulder straps and extra wide hip wings with AIRO FLEX applications, this backsystem offers maximum carrying comfort.

LITESHIELD SYSTEM

The core component of the protector backpack system is the extra-wide, ergonomically shaped neoprene hip belt with Velcro fastening and a large heavy-duty buckle. This system transfers the main load onto the hips, namely right to the body's centre of gravity.

At the same time, the ergonomically cut shoulder straps keep the backpack comfortably in the predefined position to guarantee perfect back protection. Mesh elements, EVA foam with ventilation holes and a large, central ventilation channel ensure good air circulation.

LITESHIELD SYSTEM AIR

This system combines the essential back proximity for a back protector with maximum back ventilation. The back area is close fitting and features a large, central ventilation channel as well as two rows of "ventilation grids": air mesh-covered EVA foam strips with ventilation holes and a special gabled groove reduce the contact surface on

the back, which improves air circulation. The extra-wide, ergonomically shaped hip belt is made from our AIRO FLEX material. In this way, the main load – even in the case of a fully loaded backpack – is transferred to the hips, where it is fixed, while optimum breathability is ensured.

# BACKPACKS//

Backpacks that equip you optimally for every biking situation and, as true all-rounders, are suitable for every type of use.

- Functional features incorporating top ergonomics
- Superlative carrying comfort
- Maximum air supply to the back

# BASICS & UPDATES//

Versatile backpacks with a wide range of use: from the quick after-work lap on your local trail to fully-equipped multi-day bike adventures or simply for your everyday routine in the city - this product line has what you need.

- Extremely wide range of use
- Excellent product design
- Superior-quality materials and features

## RIDE 16,12 & 8

This brand new multitalent is as versatile as it gets and is a perfect entry-level backpack: developed for biking but just as perfect for your everyday tasks.

- AIR PAD SYSTEM
- Multi-use organizer pockets
- Exterior carrying flap for helmets, jackets, etc.

BACKPACKS  
TECHNOLOGY

AIR FLOW  
CONTACT  
SYSTEM

AIR FLOW CONTACT SYSTEM

The requirement here is to transfer loads to the body's centre of gravity such that they become neutral, while at the same time minimising the contact areas with the back.

We solve this contradiction by means of a back component where all ventilation components such as

large ventilation channels and specially grooved and perforated EVA pads behind mesh material have practically been moved to the inside.

This ensures that the pack fits close to the back and simultaneously provides optimised back ventilation.

BRACE LINK

BRACE LINK

The BRACE LINK adjusts the shoulder belts perfectly to the width of the athletes shoulders.

This automatically adjustment endorse the load transfer to the body's

centre of gravity, while at the same time the contact areas with back and shoulders are minimized.

Even wearing a neck brace is possible through the BRACE LINK.

AIRO FLEX

AIRO FLEX

AIRO FLEX is an extremely sturdy material that is both permeable and flexible. We use it for our top-quality hip belts to ensure optimum load

transfer to the hips, with simultaneous maximum ventilation – for utmost carrying comfort.

AIR PAD  
SYSTEM

AIR PAD SYSTEM

The AIR PAD SYSTEM with its arrangement of 5 ventilation channels (1 main channel and 4 sub-channels) and 6 strategically positioned 3D air mesh pads offers the optimal combination of a close, load-neutral fit and back ventilation.

The shoulder straps with air mesh and large ventilation holes ensure that the pack remains securely in place in any situation, and provide optimal breathability on the shoulders as well.

VENTI FLAP

AIR CIRCULATION

AIR CIRCULATION is used in all our backpacks, as it ensures optimum ventilation while preventing excessive cooling down of the sensitive kidney area, even during extremely high-strain activities or intensive perspiration.

Constant, free air circulation is guaranteed as a result of the vertical air channel.

Gaps along the sides of the channel allow additional air to escape.

VENTI FLAP

The VENTI FLAP system enables folding the back piece away for maximum ventilation, and thus enhanced carrying comfort. During longer ascents, you can increase the distance to your back by opening the adjustment strap to boost air circulation.

During descents you can reduce the distance again, which then ensures that the backpack sits firmly and is completely neutral to movement.

BODY HUGGING

BODY HUGGING

The distinguishing feature of EVOC's "Body Hugging" fit is that the backpack's centre of gravity is positioned as close to the body as possible, and the load is distributed over a large area and transferred to the hips.

Optimised linking of the shoulder straps and the wide hip wings that "grow out" of the back part ensure that the backpack remains firmly in position during any kind of activity – for more comfort and control.

# ALL RIDE!

## JOIN THE EVOC FAMILY – GET YOUR FIRST REAL EVOC BACKPACK!

You just found out how great mountain biking is and figured that you need a good backpack for riding?

After checking what the market has to offer, an EVOC backpack turns out to be the only viable option.

However, most of your budget went into your first real bike, so you are looking for something that won't break the bank.

Of course it needs to be a fully equipped riding backpack, but as versatile as possible, too, so you

can also use it for your everyday routine, your job, shopping in the city, other sports activities... And it needs to be within your budget. But it has to be an EVOC!

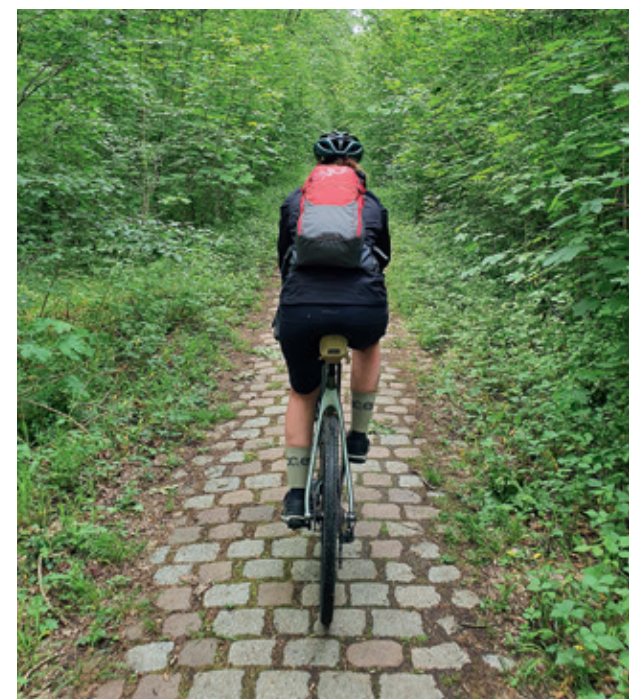

From SS21, we can offer just that: The RIDE is our most multifaceted, fully-fledged riding pack that is as versatile as any backpack can be. With an almost unlimited range of use, it's the perfect entry-level backpack with a more than acceptable price tag:

**MY FIRST EVOC! Everything will be all RIDE!**

TARPAULIN

# BIKE TRAVEL TECHNOLOGY

## THE BEST TRANSPORT SOLUTION FOR TRAVELLING WITH THE BIKE.

EVOC's hybrid concept:  
"Soft where possible, hard where necessary!"  
The advantages of a classic hard shell case and a soft pack bag are brought together in our design:

- Optimised protective function
- Minimal weight
- Can be folded up

### MAXIMUM PROTECTION AND MINIMUM WEIGHT

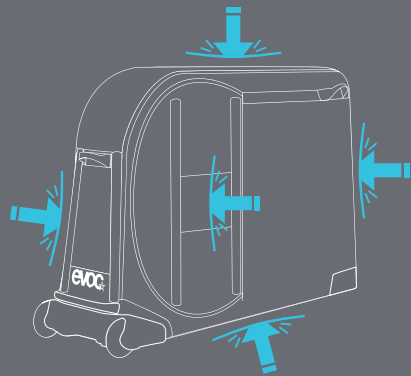

The fragile areas are optimally protected by intelligent reinforcing elements (polycarbonate covers, moulded EVA shell cases, PE boards and rods, foam padding) for the neuralgic points.

### CLEVER STANDARD FEATURES

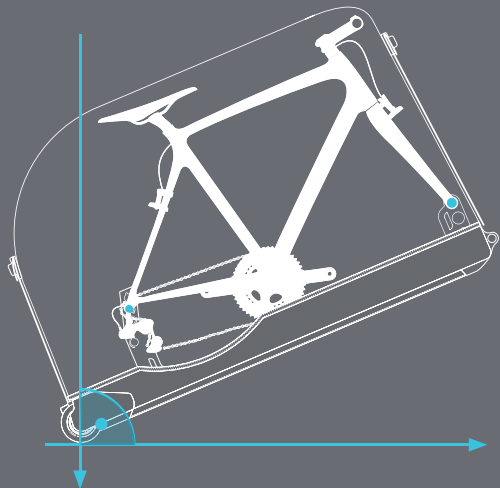

- BUSINESS CARD POCKET
- SKATE WHEELS REPLACEABLE
- ZIPPER LOCK
- COLLAPSIBLE

### OPTIMAL FORCE DISTRIBUTION

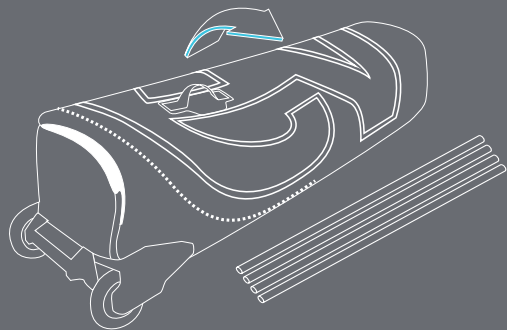

As the frame is positioned upright, the areas of the bike that can take stress (saddle, saddle post, down tube, front set, head tube, fork) are actively used to deflect pressure from the exterior.

### EASY TRANSPORT

The wheel compartments and the major part of the frame weight are in the rear section of the bag, which means that the centre of gravity is located over the wide and stable trolley parts. Because of this, it is extremely easy to pull the BIKE TRAVEL BAGS; and the multiple and usefully-positioned handles make handling easier when loading the bike.

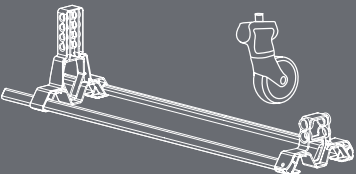

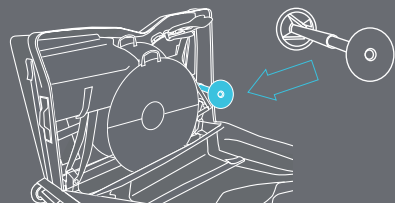

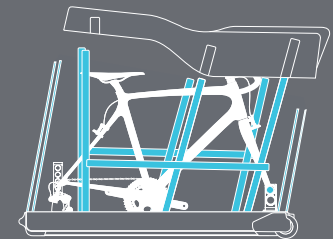

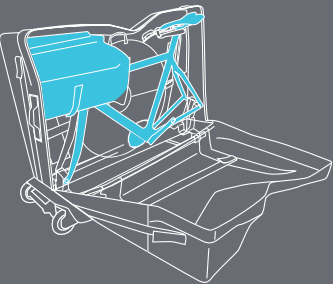

### COLLAPSIBLE

The GRP rods and plastic rods can be dismantled, so the BIKE TRAVEL BAGS can be folded up and stowed away.

# BIKE TRAVEL TECHNOLOGY

## ROAD BIKE BAG PRO

HYBRID, BIKE FITTING PROOF CONSTRUCTION FOR NEXT LEVEL ROAD- AND TRIATHLON BIKE TRAVELLING

Very safe, easy to pack and very convenient to handle. For most bike types/ - sizes you don't have to remove handle bar or saddle.

### DURABLE AND VERY LIGHT HYBRID CONSTRUCTION

Like approved at our BIKE TRAVEL BAG PRO, the base is made from a sturdy and durable EVA-molding. An impact proof Polycarbonate top protects the upper components of the bike. GFK strings at the sides connect the stable top-and bottom parts and prevent from damages by distributing the forces.

### SIDE IMPACT ABSORBER

The SIDE IMPACT ABSORBER can be placed and adjusted variably to protect the back part of the frame against side impacts.

### INCLUDING ROAD BIKE STAND AND CLIP-ON WHEEL 2.0

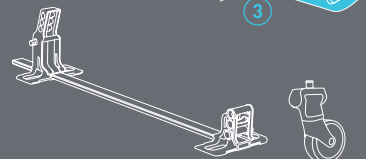

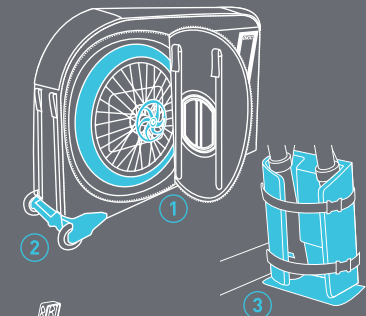

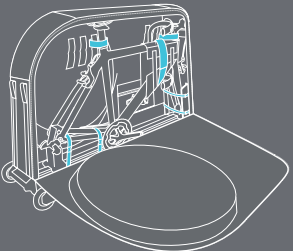

The ROAD BIKE STAND makes the fixation of the bike outside very comfortable and serves as an extra protection item.

With the CLIP-ON WHEEL 2.0, moving the ROAD BIKE BAG PRO becomes almost effortless.

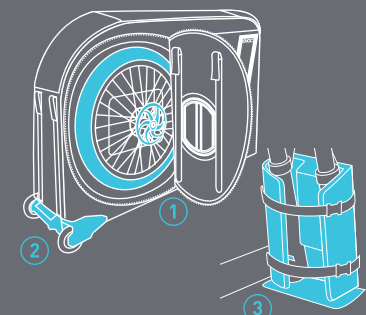

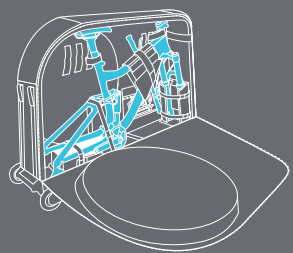

### CLEVER STANDARD FEATURES

## BIKE TRAVEL BAG PRO

## BIKE TRAVEL BAG

OUR HIGH-END SOLUTION FOR SAFE AND EASY TRANSPORT OF YOUR ROAD-, TRIATHLON-, XC-, FR-, ENDURO, DH AND <29" BIKES

### 1) 2 SEPARATE WHEEL COMPARTMENTS ON THE SIDES

The stabiliser rods over the tyres and rims distribute pressure from the exterior over the side areas, so spokes or brake discs aren't bent. Several plastic plates prevent the axles of the wheels from protruding through the material.

### 2) EXTRA WIDE UNDERCARRIAGE WITH ADDITIONAL HANDLE

The impact-protected undercarriage with the smoothly running, soft skate wheels ensures a safe transport and prevents tilting. The additional handle enables you to lift the bag securely when loading it.

### 3) REINFORCED FORK MOUNT

The fork is mounted to the rigid foam block with paddings. The fork ends are additionally protected by a plastic plate in the bottom.

AIR PAD SYSTEM

The AIR PAD SYSTEM with its arrangement of 5 ventilation channels (1 main channel and 4 sub-channels) and 6 strategically positioned 3D air mesh pads offers the optimal combination of a close, load-neutral fit and back ventilation.

The shoulder straps with air mesh and large ventilation holes ensure that the pack remains securely in place in any situation, and provide optimal breathability on the shoulders as well.

SKATE WHEELS

The durable and sturdy skate wheels ensure an easy and smooth pull of your travel product on ground surfaces anywhere from Airport tiling to concrete rubble.

Due to the flexible main material, rolling sounds are reduced to a minimum. For your convenience the skate wheels are replaceable.

EVA MOLDED BOTTOM

THE EVA MOLDED BOTTOM is a specially developed construction that maximises the stability of our WORLD TRAVELLER, TERMINAL

BAG and TERMINAL ROLLER while reducing the weight by 20% at the same time.

CAMPAIGN STORY

# CANADIAN CHUTES

CANADIAN CHUTES – with Kurt Sorge

Someone who has won the world famous Rampage three times, definitely knows about gnar, speed and serious airtime. Once more, Kurt Sorge proved that he is one of the best in extreme freeriding by killing some serious chutes in Canada on his mountain bike.

Rocky, dusty and exposed – what better field test could you envisage when working on a new collection of PROTECTION WEAR?

And what works for Kurt in these extreme conditions, should work for anybody else everywhere in the world when you're looking for severely tried-and-tested protection.

PROTECTION WEAR  
TECHNOLOGY

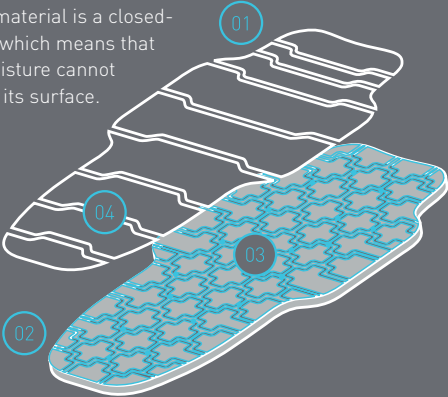

LITESHIELD PLUS BACK PROTECTOR

Even though this new back protector is extremely light, flexible and non-temperature-sensitive, it offers superior impact resistance and energy absorption. The 2-component sandwich construction **01** consists of a combination of expanded polypropylene and a TPU carrier layer. The expanded polypropylene pellets are brought into shape under high pressure and steam and simultaneously bonded with the carrier layer - without the use of adhesives or other solvents. The highly-compressed EPP foam **02** protects the chest, lumbar spine and coccyx perfectly. The side facing your back is comprised of smaller cross-shaped portions **03** (SEGMENTED PLUS DESIGN). This construction creates numerous ventilation channels that provide improved air circulation. Simultaneously, these segments offer a vast range of motion in all directions: the cross-shaped protector elements can move independently. This degree of flexibility allows the protector to sit tight in any position and hereby ensures not only a higher degree of protection, but also improved comfort.

The flexible, tear-resistant TPU support layer on the topside keeps the protector in shape. **04** The stepped, horizontal flex lines enable the LITESHIELD PLUS BACK PROTECTOR to bend so that it sits perfectly on your back in any situation.

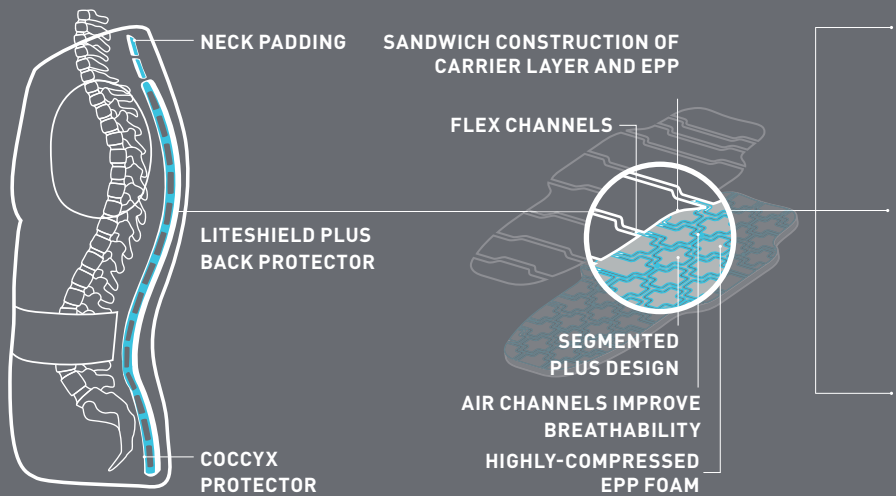

The EPP material is a closed-cell foam which means that dirt or moisture cannot penetrate its surface.

COMPOSITION OF PROTECTOR

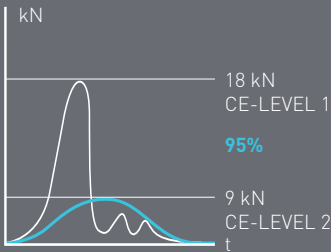

Back protector certified to EN 1621-2, level 2

CE STANDARD EN 1621-2

Materials and protective properties have been tested and certified by the accredited test laboratory to EU regulation 2016/425 for personal protective equipment, category 2.

LITESHIELD PLUS BACK PROTECTOR

CE 1621-2 REQUIREMENTS

With a residual force value of only 8,23 kN, the LITESHIELD PLUS back protector reached a level 2 damping effect. This means that approximately 95% of the impact force is absorbed! For CE standardisation, the following points are tested:

PROTECTED AREA

SIZES

TEMPERATURE RANGE

WATER TEST

DIRECTIONS FOR USE

95% SHOCK ABSORPTION

EXTRA LIGHT

HIGH DEGREE OF FLEXIBILITY

# PROTECTION WEAR TECHNOLOGY

## 01 LITESHIELD PLUS

- Excellent impact protection for the back (CE certified)
- Extra lightweight - just 168 g
- Non-temperature-sensitive (range from -20° - +23° C)
- Adapts flexibly the body to provide optimal protection
- Ventilation channels for great air circulation

## 02 SHOULDER PROTECTORS

- High-level impact protection for the shoulders (CE-certified to EN 1621-1)
- Flexible and adaptive design made of visco-elastic foam by SAS-TEC
- 3D preformed for comfort and fit

## 03 POLYGIENE ODOR CRUNCH®:

- Active protection from bad smells
- Better durability through reduced wash cycles
- Silica particles remove odours naturally
- Consists of 95% stream water and 5% silica
- Produces zero waste

## 04 CHEST PROTECTOR

- Crash and impact protection for the chest (Certified to EN 1621-3, level 1)
- Flexible and adaptive design made of visco-elastic foam by SAS-TEC
- One-piece construction for maximum protection
- Removable

## 05 HIP PADDING

- Made of viscoelastic foam for extra flexibility
- Perforated for improved breathability

## 06 FLEXIBLE, LATERAL ZIPPERS FOR INCREASED MOBILITY

- Highest YKK quality
- FIDLOCK magnetic buckles for quick and easy fastening of the shoulder straps, even with gloves.

### FREE PROTECTOR CRASH REPLACEMENT

As a special service, we offer the FREE PROTECTOR CRASH REPLACEMENT for all EVOG back protectors. Just like helmets, our back protectors are a part of your personal safety gear and intended to protect vital body parts. After a serious crash we, therefore, strongly recommend replacing the protector as a precaution.

QUALITY MADE

ENGINEERED IN GERMANY

All EVOC products are engineered in Germany to ensure the highest standards of performance, durability and quality.

PRODUCTION FACILITIES

Our products are made exclusively by handpicked manufacturers with a long-term reputation for delivering quality consistently. We ensure the quality of our products through regular on site visits and stringent quality control.

MATERIALS

All the materials we employ are precisely adapted to the specific requirements of each individual product and its range of use. Functionality, protection and durability are parameters that play a decisive role in our selection.

We work with the best suppliers worldwide and only purchase the highest-quality materials. If materials or components do not meet our expectations, we develop them ourselves.

EXPERIENCE AND FEEDBACK

Our staff of former professional athletes and ambitious riders with strong roots in biking and snow sports, has long-standing experience in manufacturing sports equipment and constantly

use our equipment around the world. Every season our products are also tested by world-class athletes who take our stuff to the limit.

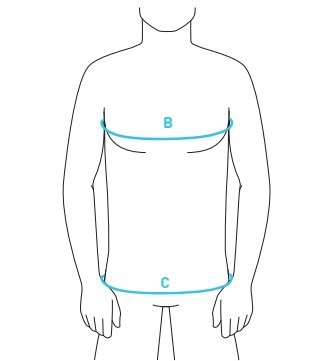

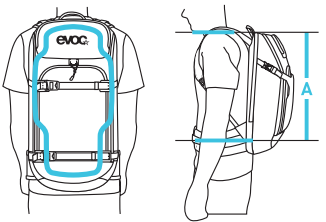

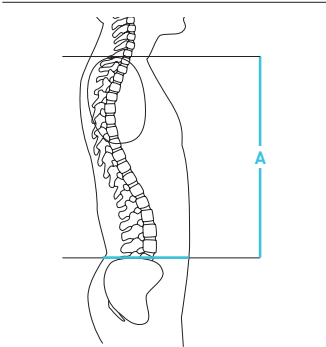

The constant testing and resulting feedback ensure that every feature of an EVOC product has been refined to perfection by the time you hold it in your hands.

# MATERIALS

**We carefully select exclusive materials for our products or tailor them exactly to our requirements.**

For use in our products, materials must be lightweight as well as exhibit optimum material properties. Our high standards in terms of product functionality and quality are the most important indicator in this regard.

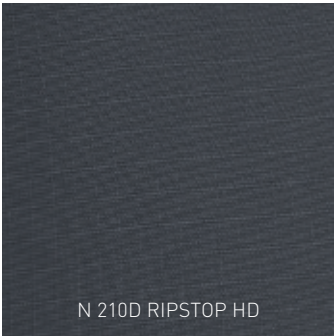

## OUTER MATERIALS

The requirements for perfect backpack and bag outer material can be summarised into four characteristics: durability, abrasion resistance, water resistance and weight. Depending on the purpose of the product, we use various types of nylon with different weaves and thicknesses that optimally support the function of the product.

TASLAN

Our high-end fabric, that sports an excellent low weight/stability ratio. Thanks to its special weave using thick and thin yarn, it is particularly tear-resistant and retains its shape, while the PU coating makes it completely waterproof.

N 210D RIPSTOP HD

Extremely lightweight and yet abrasion-resistant, this fabric with ripstop construction and high density fabric boasts and tear resistance. The crosshatch weave pattern ensures that potential tears do not easily spread. The coating makes the nylon water-repellent.

N 420D HD

This nylon is ideal for use wherever a high degree of durability and abrasion resistance is required, and it is super lightweight, too. The robust and high-quality fabric is finished with a coating on the inside for water resistance.

NYLON

Extremely abrasion resistant yet super lightweight: the new Nylon material made from a high-quality nylon-poly-ester mix with PU coating on the in-side endures even the harshest abuse. However, its surface has a soft feel and a slick matte look.

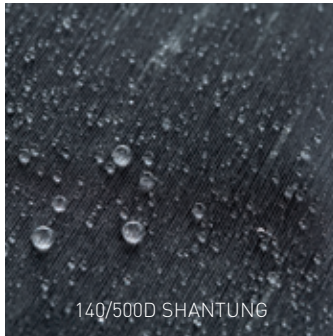

CORDURA 1000D

This high-strength cordura fabric is practically indestructible. Durability and protection are at the forefront with this material, but it also scores high points for low weight. Water-repellent thanks to the coating.

N 100D SHADOW BOX

Our most lightweight fabric for all backpacks where low weight is essential. The relief-like structure not only looks very technical, but also boasts a high degree of tear resistance as a result of its type of weave. Water resistance is achieved through a PU coating.

140/500D SHANTUNG

We use this very sturdy, abrasion-resistant and waterproof outer material made from Nylon (20 %), Poly (12 %) and TPU (68%) in all our products that are subject to direct heavy-duty usage, such as saddlebags and frame bags. The PVC-free TPU coating, which is applied by means of a particularly high-quality process known as "kiss coating", provides extra protection; and the very dense heather-look weave ensures excellent longevity.

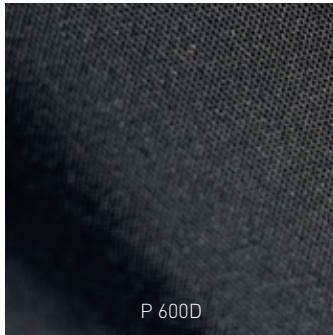

N 210 TAFFETTA

We use this light, durable and completely waterproof fabric for our rain covers, in particular.

TARPAULIN 1000D (EVOC TARPULIN)

Extremely temperature-resistant and completely waterproof – these are the properties of this high-quality PVC-free EVOC tarpaulin. Perfect for all heavy-duty EVOC products.

P 600D

Where usage involves high wear and tear, e.g. in the case of the bike travel bag or bag bases, we use this tear-resistant, lightweight and water-resistant polyester fabric. Most recently, it is finished with a KEVLAR coating so even dirt simply rolls off the fabric.

# MATERIALS

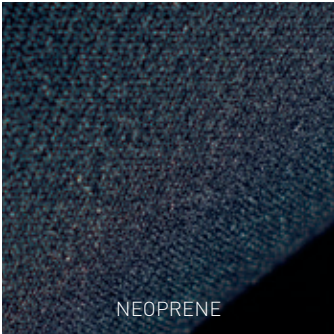

## FINISHING MATERIALS

MESH

During exercise, heat is generated, which should be wicked away from the body through appropriate ventilation. Depending on the scope of application, we use different, highly efficient mesh fabrics that ensure maximum air circulation, yet do not absorb moisture:

- AIR MESH
- 3D AIR MESH
- AIRBREATH MESH
- HONEYCOMB MESH

NEOPRENE

Neoprene exhibits flexibility and stability at the same time, and therefore offers exceptionally good grip – over a wide temperature range, and in wet and dry conditions. This makes the material our number one choice for our hip belts, which are possibly the most important backpack components for distributing load towards the body's centre of gravity for maximum comfort.

AIRO FLEX

With its origin in medical device technology, this extremely sturdy premium material has everything to justify its use in our top-quality hip belts: exceptionally flexible, completely air-permeable, and yet sufficiently sturdy to keep the backpack in place with the load as close as possible to the body's centre of gravity.

## TREATMENTS & FINISHES

Our materials are finished with high-quality coatings that extend their lifespan and enhance the quality of our products. The coatings used on our lightweight outer materials provide protection from dirt and stains and prevent moisture from penetrating.

**POLYGIENE® ODOR CRUNCH**  
Equipment that prevents odour. This feat is made possible by modified silica particles that absorb molecules containing sulphur or nitrogen, break them down into smaller odourless molecules and hereby remove the unpleasant smells.

- PU COATING
- KEVLAR COATING
- DURABLE WATER REPELLENCY

## LININGS

By linings we mean our lining and inner materials that are used on our bags and backpacks. We vary these, too, according to the intended use for the bag or backpack, and ensure they are colour-coordinated so that the design experience can continue to be appreciated once they are opened up.

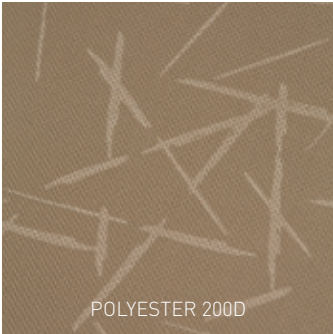

POLYESTER 210 TAFETTA

Our TRAVEL Line linings are soft and silky to touch and hold their shape well thanks to the fine web structure of the fabric. Ideal protection for clothing and personal equipment. The extra coating ensures it is robust enough for sporting journeys, too.

ULTRA SONIC

A very soft, velvety and pumped-up 3-layered material. It protects sensitive contents and is therefore used in the laptop compartment of our MISSION PRO.

POLYESTER 200D

Particularly robust and with an extra coating for enhanced resistance to wear and tear, our first choice for tool, hydration bladder and avalanche compartments and the like.

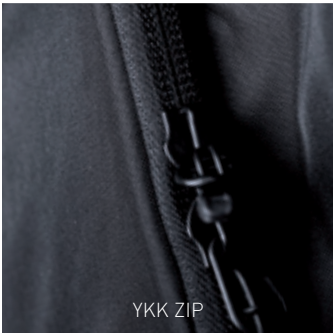

## FEATURES & ACCESSORIES

For our products, we only use premium accessories that support their function and add design value. If we cannot find the right accessories for our equipment, we simply develop them ourselves in order to optimally satisfy our expectations.

- YKK PLASTIC ADD-ON PARTS AND ZIPPERS
- WOJIN PLASTIC ADD-ON PARTS
- HYPALON ZIPPER GARAGES
- NON-STICK VELCRO
- EVA TARPAULIN MESH (PVC-FREE)

## PROTECTOR MATERIALS

**liteshield**  
BACK PROTECTOR

Originally used in motorcycling, this segmented EPS layer construction is characterised by maximum shock absorption values, extremely low weight and complete temperature insensitivity. TÜV/GS-certified.

**liteshield** plus  
BACK PROTECTOR

Innovative, extremely light, flexible and non-temperature-sensitive back protector. The 2-component sandwich construction made of highly-compressed EPP foam offers excellent impact protection and adapts to every movement with its plus-shaped segments. CE-certified to EN 1621-2, level 2.

**SAS-TEC**  
body protection systems

3D preformed, viscoelastic shoulder and chest protection elements with a high level of impact protection and outstanding ergonomics. CE-certified.

# ATHLETES//

IT IS VERY EASY, TO BE DIFFERENT, BUT VERY DIFFICULT TO BE BETTER.

All our products have been developed for specific areas of use and fulfil high demands in terms of functionality and durability. We rely on the know-how and expertise of our pro athletes in this regard, who push our equipment to the limits day in and day out. Each and every one of them in their own way and to meet their personal demands, but every one of them with true passion at all times! We are proud to be working with these international top athletes. It's through them that our products become that vital bit better.

# //EVOC RETAIL PROGRAM

Today, retail is facing completely new challenges.

What consumers expect from brick and mortar shops is a great variety of products and immediate availability. An optimal product presentation and pleasant shopping environment help the customer to make a good purchase decision.

Consistent communication and brand message give the buyer a feel of safety when buying a high quality product.

This is why EVOC offers retailers a specific retail program, including sales promotion concepts and measurements. Adding to the program offer are presentation aids, displays, and sales tools.

Please contact your distributor for more information or write to [info@evocsports.com](mailto:info@evocsports.com)

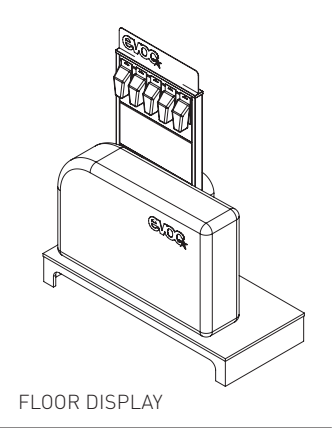

# EVOC PROGRAM STORE

The EVOC Retail Program is offering a wide range of individual solutions for brand communication and produkt präsentation.

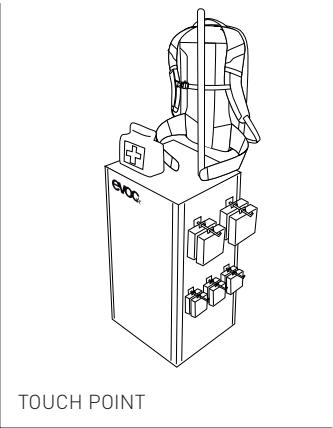

The beautiful display system has been developed in house and is supporting your shop design and visual merchandising.
